airbus a330 sas: Vällingby Holger Schüttkus, 2024-04-08 14 november 1954 invigdes Vällingby och blev en internationellt uppmärksammas händelse i en tid då den politiska atmosfären präglades av optimism och handlingskraft. Stadsplanedirektör Sven Markelius hade 1940-talets samhällsplanerare hämtat inspiration från Englands new towns. I övergripande planprincipen för de nya stadsdelarnas uppbyggnad var ABC-principen: A står för Arbete, B för Bostäder och C för Centrum. Med ABC-staden åstadkom stadsplanerna en mångsidigare miljö än den tidigare gängse sovförorten. Man uppförde höghusbostäder, trädgårdsstadsbetonad bebyggelse samt närbelägna större arbetsplatser. Och kanske det mest lockande; ett centrum med tunnelbana, butiker, lyxkrogen Vällingehus och Sveriges första moderna shoppingcenter. Neonskyltar på taken visade vägen till de nya varuhusen Kivickly i amerikansk inspiration och Tempo vid Vällingbygrillen. 1955 skrev tidningarna om Vällingbyfebern. Aldrig någonsin förr hade en stadsdel marknadsförts så intensivt. Under 50- och 60-talen kom besökare till Vällingby från jordens alla hörn för att se den nya framtidsstaden. Anstormningen av nyfikna var så stor att språkkunniga unga flickor, Fröken Vällingby, anställdes för att guida besökarna runt. 1987 klassades centrumet som kulturellt intressant miljö av Riksantikvarieämbetet. Våren 2008 återinvigdes Vällingby city (ej officiellt godkänt av kommunens namnberedning varför det officiella namnet fortfarande är Vällingby Centrum. Namnet city kan ses som ett samlingsnamn på butikerna i området. 2017 bytte ägarna tillbaka namnet till Centrum), efter en om- och tillbyggnadsperiod tog fem år, kostat totalt tre miljarder att genomföra i upprustad stadskärna med den berömda 1950-talsmiljön bevarad, samt ny modern arkitektur tillkommit. Gert Wingårdhs ritade K-fem utsågs 2008 till Världens bästa byggnad för shopping på World Architecture Festival i Barcelona, och fick Svenska Ljuspriset 2008 och Nordiska Ljuspriset 2010.

airbus a330 sas: AIR CRASH INVESTIGATIONS MIRACLE ON THE HUDSON RIVER The Ditching of US Airways Flight 1549 Pete Collins, Editor, 2014-04-22 On January 15, 2009, about 1527 eastern standard time, US Airways flight 1549, an Airbus Industrie A320-214, N106US, experienced an almost complete loss of thrust in both engines after encountering a flock of birds and was subsequently ditched on the Hudson River about 8.5 miles from LaGuardia Airport (LGA), New York City, New York. The flight was en route to Charlotte Douglas International Airport, Charlotte, North Carolina, and had departed LGA about 2 minutes before the in-flight event occurred. The 150 passengers and 5 crewmembers evacuated the airplane via the forward and overwing exits. One flight attendant and four passengers were seriously injured, and the airplane was substantially damaged beyond repair. The National Transportation Safety Board determines that the probable cause of this accident was the ingestion of large birds into each engine, which resulted in an almost total loss of thrust in both engines and the subsequent ditching on the Hudson River.

airbus a330 sas: Industrial Aviation Management Martin Hinsch, 2018-09-07 This book outlines the structure and activities of companies in the European aviation industry. The focus is on the design, production and maintenance of components, assemblies, engines and the aircraft itself. In contrast to other industries, the technical aviation industry is subject to many specifics, since its activities are highly regulated by the European Aviation Safety Agency (EASA), the National Aviation Authorities and by the aviation industry standard EN 9100. These regulations can influence the companies' organization, personnel qualification, quality management systems, as well as the provision of products and services. This book gives the reader a deeper, up-to-date insight into today's quality and safety requirements for the modern aviation industry. Aviation-specific interfaces and procedures are looked at from both the aviation legislation standpoint as well as from a practical operational perspective.

airbus a330 sas: The use of airspace Great Britain: Parliament: House of Commons: Transport Committee, 2009-07-10 The Government's Future of Air Transport strategy aims to significantly increase UK airport capacity over the next two decades to accommodate the predicted growth in demand for air travel. New runways at Heathrow and Stansted airports are two of the key airport development proposals. If all the White Paper-supported airport development proposals came to fruition, current Government forecasts predict that the number of passengers passing through UK airports will increase from 241 million passengers a year in 2007 to 455 million passengers a year in 2030. This UK growth matches air traffic predictions for the whole continent. Eurocontrol, the European Organisation for the Safety of Air Navigation, predicts that European air traffic will double by 2020. If rising demand for air travel is to be met effectively through additional airport capacity, a corresponding increase in airspace capacity must be realised. However, a country's airspace, the portion of atmosphere above its territory and territorial waters, controlled by that country is a finite resource. UK airspace, particularly in the South East of England, is already some of the busiest and most complex to manage in the world. This will almost certainly require improvements in the efficiency of the UK air traffic management system. The Committee's inquiry aims to look at how to meet these challenges. Its findings are aimed at those organisations responsible for airspace-related decisions in the UK: the CAA, NATS, and the Department for Transport. Passenger numbers and freight demand globally have declined in 2008 and in the first months of 2009. In its conclusions and recommendations the Committee covered the management of airspace, strategy, change and co-ordination in airspace management, environmental impacts of airspace changes and European

developments.
