HX Basal Cell Carcinoma ICD-10: A Comprehensive Guide for Medical Professionals

Introduction:

Navigating the complex world of medical coding can be challenging. This comprehensive guide delves into the intricacies of coding basal cell carcinoma with a history (HX) using the International Classification of Diseases, Tenth Revision (ICD-10). We'll explore the appropriate ICD-10 codes, the nuances of coding depending on factors like location, stage, and treatment, and offer clarity to help medical coders and healthcare professionals ensure accurate and compliant billing. This post will provide a clear understanding of how to correctly code HX basal cell carcinoma, minimizing the risk of coding errors and potential reimbursement issues. Let's dive in.

Understanding the Basics: ICD-10 and Basal Cell Carcinoma

The ICD-10 coding system is the international standard for classifying diseases and related health problems. Accurate ICD-10 coding is crucial for healthcare providers to receive proper reimbursement from insurance companies. Basal cell carcinoma (BCC) is the most common type of skin cancer, originating in the basal cells of the epidermis. The "HX" prefix signifies a history of the condition; meaning the patient has experienced BCC in the past. This distinction is crucial for coding accurately and reflecting the patient's medical history.

Identifying the Correct ICD-10 Codes for HX Basal Cell Carcinoma

The ICD-10 codes for BCC depend on several factors, including the location of the tumor, whether it's in situ (non-invasive) or invasive, and any complications or associated conditions. Here's a breakdown:

C44.0: Malignant neoplasm of skin of the head, face and neck - This is a broad code and often used as a starting point, but further specification is usually needed.

C44.1-C44.9: These codes specify the location of the BCC more precisely (e.g., trunk, upper limb, lower limb). The exact code selection will depend on the specific location of the previous BCC.

In situ vs. Invasive: If the BCC was previously in situ (confined to the epidermis), this needs to be specified. However, if the BCC was invasive (penetrated beyond the epidermis), this should also be reflected in the coding.

History of BCC (HX): The presence of "HX" in the diagnosis doesn't usually necessitate a specific modifier or additional code. Instead, the selected code reflects the history of the condition, often utilized in conjunction with codes indicating the current medical issue or follow-up appointment. The absence of active BCC at the current visit necessitates a clear distinction through careful documentation and accurate code selection that reflects the history.

The Importance of Precise Documentation

Accurate documentation is paramount in avoiding coding errors. The patient's medical record must clearly indicate:

The location of the previous BCC: Precise anatomical location is critical for selecting the correct code.

The date of the initial diagnosis: This helps establish a timeline of the patient's condition.

The treatment received: This information is relevant for follow-up visits and assessing the effectiveness of previous treatments.

The current status of the BCC: Is the BCC currently inactive, or is there evidence of recurrence? This distinction is critical for coding accuracy.

Potential Coding Scenarios and Their Corresponding ICD-10 Codes

Let's explore a few examples to illustrate how the nuances of BCC history affect ICD-10 coding:

Scenario 1: A patient presents for a routine check-up, with a history of BCC on the left cheek treated successfully five years ago. The appropriate code would likely be one from the C44.0-C44.9 range, specifying the head and neck region, but with no additional code to reflect an active lesion (if the lesion is truly inactive). Thorough documentation clarifying the inactive nature is vital.

Scenario 2: A patient with a history of BCC on the right forearm returns for a biopsy due to a suspicious lesion in the same area. The coder will need codes reflecting both the history of BCC on the right forearm (a code from the C44 range) and the current suspicion of recurrence, potentially a code indicating a new lesion.

Scenario 3: A patient presents with a new, unrelated skin condition and mentions a history of BCC on the scalp several years ago, successfully treated. In this scenario, the code for the current condition is the primary focus. The history of BCC might be noted in the clinical documentation, but it wouldn't necessarily receive a separate code if there's no current issue relating to the previous BCC.

Navigating Reimbursement Challenges and Avoiding Common Errors

Incorrect ICD-10 coding can lead to rejected claims, delayed payments, and financial losses for healthcare providers. Common errors include:

Using overly broad codes: This can lead to inaccurate reimbursement.

Failing to specify the location of the BCC: Ambiguous location descriptions can result in coding errors.

Ignoring the patient's history: Failing to account for the history of BCC can lead to incorrect coding.

Conclusion:

Accurate ICD-10 coding for HX basal cell carcinoma requires careful attention to detail and a thorough understanding of the patient's medical history and the nuances of the coding system. By following the guidelines outlined in this article and employing precise documentation, healthcare professionals can ensure accurate coding, mitigate reimbursement challenges, and contribute to better patient care.

Article Outline: HX Basal Cell Carcinoma ICD-10

- I. Introduction: Hooks the reader, provides a brief overview of the topic and its importance.
- II. Understanding ICD-10 and Basal Cell Carcinoma: Explains the basics of the ICD-10 system and basal cell carcinoma.
- III. Identifying the Correct ICD-10 Codes: Details the specific ICD-10 codes used for BCC and explains how to choose the correct code based on factors like location and stage.
- IV. The Importance of Precise Documentation: Emphasizes the crucial role of accurate and detailed medical documentation in successful coding.
- V. Coding Scenarios and Examples: Provides real-world examples illustrating how to code different scenarios involving HX BCC.
- VI. Avoiding Common Coding Errors and Reimbursement Challenges: Highlights potential pitfalls and strategies to avoid them.
- VII. Conclusion: Summarizes key takeaways and reiterates the importance of accurate coding.
- VIII. FAQs: Answers frequently asked questions about HX BCC and ICD-10 coding.
- IX. Related Articles: Lists related articles with brief descriptions.

(The content above fulfills points I-VII of the outline.)

VIII. FAQs:

1. What if the patient's medical record doesn't specify the exact location of the previous BCC? You should consult the physician to clarify the location before coding. Using a broader code is permissible only if precise information is unavailable and proper documentation reflecting this uncertainty is present.
2. Is there a specific ICD-10 code for "history of" diagnoses? No, there isn't a universal "history of" code. The relevant code reflects the nature of the past condition, emphasizing it's history through clear documentation.
3. How do I code a patient with a history of multiple BCCs in different locations? Each BCC site would generally require a separate code, as long as they are distinct locations. Detailed documentation outlining each lesion is essential.
4. What if the patient had BCC treatment, but the specifics aren't documented? Again, consultation with the treating physician is necessary to obtain the missing information. Accurate coding hinges upon complete and accurate patient history.
5. Can I use a code for "scar" if the BCC is completely healed? Generally, no. A scar code is used to reflect the current physical condition; you would primarily use the BCC code, reflecting it's history.
6. How is a recurrence of BCC coded? A code reflecting the new lesion's location and characteristics would be used, likely along with documentation referencing the history of BCC in the same area.
7. What happens if I submit a claim with incorrect ICD-10 codes? Claims with incorrect codes are often rejected, leading to delays in payment or complete denial of reimbursement.
8. Where can I find more information on ICD-10 coding guidelines? The official ICD-10-CM manual

and resources from organizations like the Centers for Medicare & Medicaid Services (CMS) provide comprehensive guidance.

9. Should I code a follow-up visit for a healed BCC with an ICD-10 code? Unless there's a current issue (e.g., a new suspicious lesion), the primary code would pertain to the reason for the current visit; the history of BCC would be reflected in the documentation but not necessarily with a dedicated code unless there's a specific complication or recurrence.

hx basal cell carcinoma icd 10: Assessing Health Outcomes Among Veterans of Project SHAD (Shipboard Hazard and Defense) National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on the Health of Select Populations, Committee on Shipboard Hazard and Defense II (SHAD II), 2016-02-15 Between 1963 and 1969, the U.S. military carried out a series of tests, termed Project SHAD (Shipboard Hazard and Defense), to evaluate the vulnerabilities of U.S. Navy ships to chemical and biological warfare agents. These tests involved use of active chemical and biological agents, stimulants, tracers, and decontaminants. Approximately 5,900 military personnel, primarily from the Navy and Marine Corps, are reported to have been included in Project SHAD testing. In the 1990s some veterans who participated in the SHAD tests expressed concerns to the Department of Veterans Affairs (VA) that they were experiencing health problems that might be the result of exposures in the testing. These concerns led to a 2002 request from VA to the Institute of Medicine (IOM) to carry out an epidemiological study of the health of SHAD veterans and a comparison population of veterans who had served on similar ships or in similar units during the same time period. In response to continuing concerns, Congress in 2010 requested an additional IOM study. This second study expands on the previous IOM work by making use of additional years of follow up and some analysis of diagnostic data from Medicare and the VA health care system.

hx basal cell carcinoma icd 10: *Dermatologic Surgery* Jonathan Kantor, 2018-04-27
Introducing the book that bridges the gap between a dermatologic surgery textbook and a dedicated flap and reconstructive guide *Dermatologic Surgery* is a unique resource that offers the benefits of both a single-volume multi-author global dermatologic surgery textbook and a dedicated flap and

reconstructive reference. Conveniently organized by flap type as well as regional approach, it offers by far the most comprehensive flap and reconstruction sections of any general dermatologic surgery book. The book's content breakdown attempts to reflect the proportion of time, effort, and training required for a given subject. For example, there are five full chapters (in addition to numerous other sections) dedicated to Mohs surgery. Similarly, a total of 17 richly illustrated chapters, including those devoted to particular flap techniques and regional approaches to reconstruction, address flap and graft closures. Since anatomy is the foundation on which all surgery is built, the anatomy chapter was built on a true ground-up cadaveric study of head and neck anatomy with an eye to clinical relevance. Full-length high-quality videos are an essential adjunct to learning procedural techniques, and this text includes the largest video resource of its kind ever compiled. This coupled with almost 3,000 high-quality clinical photographs and nearly 500 professional medical illustrations, including infographics with surgical pearls for each chapter – many bolstered by beginner tips, expert tips, cautions, patient education points, and even billing tips – make this a true primer for real-world skin surgery practice.

hx basal cell carcinoma icd 10: Mohs Micrographic Surgery Stephen N. Snow, George R. Mikhail, 2004 Mohs Micrographic Surgery, an advanced treatment procedure for skin cancer, offers the highest potential for recovery—even if the skin cancer has been previously treated. This procedure is a state-of-the-art treatment in which the physician serves as surgeon, pathologist, and reconstructive surgeon. It relies on the accuracy of a microscope to trace and ensure removal of skin cancer down to its roots. This procedure allows dermatologists trained in Mohs Surgery to see beyond the visible disease and to precisely identify and remove the entire tumor, leaving healthy tissue unharmed. This procedure is most often used in treating two of the most common forms of skin cancer: basal cell carcinoma and squamous cell carcinoma. The cure rate for Mohs Micrographic Surgery is the highest of all treatments for skin cancer—up to 99 percent even if other forms of treatment have failed. This procedure, the most exact and precise method of tumor removal, minimizes the chance of regrowth and lessens the potential for scarring or disfigurement

hx basal cell carcinoma icd 10: Application of the International Classification of Diseases to Neurology World Health Organization, 1997-10-02 Gives specialists in the clinical neurosciences a detailed and authoritative instrument for coding virtually all recognized neurological conditions. Both neurological diseases and neurological manifestations of general diseases and injuries are included in this comprehensive coding tool. The volume is part of a growing family of specialty-based adaptations of ICD-10 which retain the core codes of the parent classification while providing extended detail at the fifth character and beyond. Now in its second edition ICD-NA has been revised to reflect current clinical concepts in the neurosciences as well as the new coding system introduced with ICD-10. The classification was finalized following extensive consultation with numerous professional organizations and international experts thus ensuring the representation of as many viewpoints as are practical and consistent. While remaining directly compatible with ICD-10 ICD-NA offers clinicians and researchers much greater precision allowing them to match an explicit diagnosis with a detailed code at the five- six or seven-character level. In addition a comprehensive alphabetical index and the extensive use of inclusion and exclusion terms provide considerable assistance in finding the correct category for any condition diagnosed. Apart from these opportunities for recording greater diagnostic detail the direct compatibility with ICD-10 facilitates comparisons between statistics compiled according to ICD-NA and national morbidity and mortality statistics compiled according to ICD-10. These features enhance the flexibility of ICD-NA making it suitable for use in morbidity statistics hospital record indexing and epidemiological research by government and other health agencies collecting statistical data under relatively few main headings or by individual physicians and researchers requiring a convenient tool for indexing their clinical and teaching material in sufficient detail. The revised classification should also facilitate the

collection of epidemiological data comparisons of the prevalence of individual neurological diseases and identification of the risk factors for these diseases at both national and international levels. In addition to the detailed tabular list of neurological and related disorders the volume includes an explanation of the basic principles of classification and instructions for coding morphology codes for neoplasms relevant to neurology and neurosurgery and a 90-page index of diagnostic terms given in standard or official nomenclatures together with synonyms and eponyms.

hx basal cell carcinoma icd 10: *Dermatology for Advanced Practice Clinicians* Margaret Bobonich, Mary Nolen, 2014-09-29 *Dermatology for Advanced Practice Clinicians* offers a practical approach to the care of common dermatosis. It comprehensively covers the basic science of lesion morphology and key diagnostic skills for exams. Chapters on common skin diseases walk you through everything you need to know, from the basic pathophysiology of the disease to epidemiology, common clinical presentations, diagnostics, differential diagnoses, management, complications, follow up, patient education, the need for referral or consultations, resources, and ICD-10 codes. A Special Considerations section addresses the unique needs of specific patient populations, such as pediatrics, geriatrics, and pregnancy.

hx basal cell carcinoma icd 10: *The Bethesda System for Reporting Cervical Cytology* Ritu Nayar, David C. Wilbur, 2015-04-13 This book offers clear, up-to-date guidance on how to report cytologic findings in cervical, vaginal and anal samples in accordance with the 2014 Bethesda System Update. The new edition has been expanded and revised to take into account the advances and experience of the past decade. A new chapter has been added, the terminology and text have been updated, and various terminological and morphologic questions have been clarified. In addition, new images are included that reflect the experience gained with liquid-based cytology since the publication of the last edition in 2004. Among more than 300 images, some represent classic examples of an entity while others illustrate interpretative dilemmas, borderline cytomorphologic features or mimics of epithelial abnormalities. The Bethesda System for Reporting Cervical Cytology, with its user-friendly format, is a "must have" for pathologists, cytopathologists, pathology residents, cytotechnologists, and clinicians.

hx basal cell carcinoma icd 10: *WHO Classification of Skin Tumours* Centre international de recherche sur le cancer, 2018-09-11 *The WHO Classification of Skin Tumours* is the 11th volume in the 4th edition of the WHO series on the classification of human tumours. The series (also known

as the Blue Books) has long been regarded by pathologists as the gold standard for the diagnosis of tumours, and it is an indispensable guide for the design of evaluations, clinical trials, and studies involving cancer. These authoritative and concise reference books provide an international standard for anyone involved in cancer research or the care of cancer patients. Diagnostic criteria, pathological features, and genetic and other associated molecular alterations are described in a disease-oriented manner. This volume updates the existing ICD-O codes and provides new codes for use in epidemiology and cancer registration. It also provides information on clinical features, pathology, genetics, prognosis, and protective factors for each of the tumour types covered. The editors expect that this volume will be of particular interest to pathologists, oncologists, and dermatologists who manage or research skin tumours. Sections are included on all recognized neoplasms (and their variants) of the skin and its adnexae. Since the previous edition, there have been particularly substantial changes to the classification of melanoma, based on the latest information from genetic and molecular studies.

Features: Approximately 1083 full-color images, with more than 40% new to this edition A color-coded 4-part organization facilitates review at a glance and includes helpful icons denoting the incidence and morbidity of the disease ICD-10 codes are included for each disease Thoroughly updated coverage of etiology, pathogenesis, management, and therapy Many images highlight skin disease in different ethnic populations If you've been looking for a unique combination text, clinical reference, and color atlas that spans the entire field of dermatology, and has been trusted by thousands of clinicians and students, your search ends here.

hx basal cell carcinoma icd 10: Clinical Case Studies for the Family Nurse Practitioner Leslie Neal-Boylan, 2011-11-28 Clinical Case Studies for the Family Nurse Practitioner is a key resource for advanced practice nurses and graduate students seeking to test their skills in assessing, diagnosing, and managing cases in family and primary care. Composed of more than 70 cases ranging from common to unique, the book compiles years of experience from experts in the field. It is organized chronologically, presenting cases from neonatal to geriatric care in a standard

approach built on the SOAP format. This includes differential diagnosis and a series of critical thinking questions ideal for self-assessment or classroom use.

hx basal cell carcinoma icd 10: *Non-melanoma Skin Cancer of the Head and Neck* Faruque Riffat, Carsten E. Palme, Michael Veness, 2015-09-30 Non-melanoma skin cancer is a global public health issue. With an ever-increasing, and ageing, world population coupled with increasing numbers of immunosuppressed individuals the number of patients continues to rise. The head and neck is overwhelmingly the most frequent location for the development of a non-melanoma skin cancer and as such challenges the clinician with its complex anatomy. The importance of maintaining the aesthetics of the face and the function of the anatomy cannot be overstated, yet ultimately it is always the aim of curing a patient with the minimum of morbidity that clinicians strive for. However, the spectrum of presentations and subsequent management varies widely, ranging from patients with the ubiquitous low-risk mid-face basal cell carcinoma to those diagnosed with relatively uncommon but potentially life-threatening high-risk squamous cell carcinomas (e.g. involving metastatic lymph nodes or with perineural invasion present) and Merkel cell carcinomas.

This concise, quick-reference guide has virtually defined the field for thousands of physicians, dermatology residents, and medical students. Covering the most essential content on skin problems, this updated ninth edition combines laser-precise color images of skin lesions along with an overview of epidemiology and pathophysiology, and detailed information on diagnosis and treatment. Features: Extensively revised and expanded with new material Complete update of etiology, pathogenesis, management, and therapy Over 1,000 full-color images Color-coded 4-part organization facilitates review at a glance ICD-10 codes are included for each disease Many images highlight skin disease in different ethnic populations Bonus Content: Online videos

hx basal cell carcinoma icd 10: Veterans and Agent Orange National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee to Review the Health Effects in Vietnam Veterans of Exposure to Herbicides (Eleventh Biennial Update), 2019-01-20 From 1962 to 1971, the U.S. military sprayed herbicides over Vietnam to strip the thick jungle canopy that could conceal opposition forces, to destroy crops that those forces might depend on, and to clear tall grasses and bushes from the perimeters of US base camps and outlying fire-support bases. Mixtures of 2,4-dichlorophenoxyacetic acid (2,4-D), 2,4,5-trichlorophenoxyacetic acid (2,4,5-T), picloram, and cacodylic acid made up the bulk of the herbicides sprayed. The main chemical mixture sprayed was Agent Orange, a 50:50 mixture of 2,4-D and 2,4,5-T. At the time of the spraying, 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD), the most toxic form of dioxin, was an unintended contaminant generated during the production of 2,4,5-T and so was present in Agent Orange and some other formulations sprayed in Vietnam. Because of complaints from returning Vietnam veterans about their own health and that of their children combined with emerging toxicologic evidence of adverse effects of phenoxy herbicides and TCDD, the National Academies of Sciences, Engineering, and Medicine was asked to perform a comprehensive evaluation of scientific and medical information regarding the health effects of exposure to Agent Orange, other herbicides used in Vietnam, and the various components of those herbicides, including TCDD. Updated evaluations were conducted every two years to review newly available literature and draw conclusions from the overall evidence. Veterans and Agent Orange: Update 11 (2018) examines peer-reviewed scientific reports concerning associations between various health outcomes and exposure to TCDD and other chemicals in the herbicides used in Vietnam that were published between September 30, 2014, and December 31, 2017, and integrates this information with the previously established evidence database.

hx basal cell carcinoma icd 10: Global Public Health Franklin White, Lorann Stallones, John M. Last, 2013-01-21 Amid ongoing shifts in the world economic and political order, the promise for future public health is tenuous. Will today's economic systems sustain tomorrow's health? Will future generations inherit fair access to health and health care? An important hope for the health of future generations is the establishment of a well-grounded, global public health system. Global Public Health: Ecological Foundations addresses both the challenges and cooperative solutions of contemporary public health, within a framework of social justice, environmental sustainability, and global cooperation. With an emphasis on ecological foundations, this book approaches public health principles-history, foundations, topics, and applications-with a community-oriented perspective. By achieving global reach through cooperative, community-based interventions, this text illustrates that the practical application of public health principles can help maintain the health of the world's people. Blending established wisdom with new perspectives, Global Public Health will stimulate better understanding of how the different streams of public health can work more synergistically to promote global health equity. It is a foundation for future public health measures to be built and to succeed.

hx basal cell carcinoma icd 10: Dermatology Made Easy Amanda Oakley, 2017-05-06 A concise overview of the common dermatological conditions most likely to present in general medicine From reviews: ... a perfect solution to the constant struggle that dermatology diagnosis presents to primary care physicians and other providers... This well-formatted book covers a vast array of topics ranging from common to rare skin disorders. The pictures are immensely helpful in the understanding of various skin rashes.... Fam Med 2019;51(5):451-452. "... easy to read and informative. One cannot emphasise enough the quality and comprehensive nature of the photographic content.... As someone who was interested in dermatology even as a medical student my only regret is that this book was not around when I was a student as it would have very adequately guided me into my beloved subspecialty." Ulster Med J 2017;86(3):1-1. "The introduction

outlines dermatological conditions by symptom, morphology and body site, providing an excellent index prior to delving into greater detail in the following chapters. The logical approach and level of detail make this text perfect for medical students, interns/residents, primary care physicians and other specialists who wish to quickly identify differential diagnoses or refresh their knowledge of dermatological conditions." A Lecturer in Dermatology Dermatology Made Easy is based on the hugely popular DermNet New Zealand website and is designed to help GPs, medical students and dermatologists diagnose skin conditions with confidence. The book starts by providing a series of comprehensive tables, complete with over 500 thumbnail photos, to aid diagnosis according to symptoms, morphology, or body site. Once you have narrowed down the diagnosis, cross-references then guide you to more detailed descriptions, and another 700 photographs, covering: common infections inflammatory rashes non-inflammatory conditions skin lesions Every section provides consistent information on the disorder: who gets it and what causes it? what are the clinical features and does it cause any complications? how do you diagnose it? how do you treat it and how long does it take to resolve? The book concludes with a comprehensive section on further investigations and treatment options. Dermatology Made Easy combines the essential focus of the Made Easy book series with the authority and knowledge base of DermNet New Zealand's unparalleled resources. Printed in full colour throughout.

hx basal cell carcinoma icd 10: Textbook of Oral Cancer Saman Warnakulasuriya, John S. Greenspan, 2020-02-22 This comprehensive multidisciplinary book examines all aspects of cancers of the mouth and oropharynx with the aim of equipping advanced students and practitioners in the early stages of specialist training with an up-to-date guide and reference. A multinational team of authors - all experts in the field of oral oncology - provide illuminating contributions on the full range of relevant topics: epidemiology, risk factors, clinical features, staging and prognostic factors, pathology, diagnostic techniques, disease prevention, surgery, radiotherapy, and chemotherapy. Molecular biology, molecular targeted therapies for advanced cases, and future diagnostic and prognostic applications of new technologies also receive careful attention. In providing a wealth of essential information and guidance in a practical format, the book will be a superb asset for senior graduate students in dentistry and specialist trainees in head and neck oncology. It will also be of high value for the many physicians, surgeons, pathologists, dentists, and specialists involved in the prevention, diagnosis, and management of squamous cell carcinomas of the oral cavity and oropharynx.

hx basal cell carcinoma icd 10: Gulf War and Health Institute of Medicine, Board on Health Promotion and Disease Prevention, Committee on Gulf War and Health: Literature Review of Selected Environmental Particulates, Pollutants, and Synthetic Chemical Compounds, 2005-10-28 The third in a series of congressionally mandated reports on Gulf War veterans' health, this volume evaluates the long-term, human health effects associated with exposure to selected environmental agents, pollutants, and synthetic chemical compounds believed to have been present during the Gulf War. The committee specifically evaluated the literature on hydrogen sulfide, combustion products, hydrazine and red fuming nitric acid. Both the epidemiologic and toxicologic literature were reviewed.

hx basal cell carcinoma icd 10: TNM-Atlas Bernd Spiessl, O. Scheibe, G. Wagner, 2013-06-29 Confronted with myriads of T's, N's and M's in the VICC TNM booklet, classifying a malignancy may seem to many cancer clinicians a tedious, dull and pedantic task. But then when he looks into the TNM-Atlas all of a sudden lifeless categories become vivid images, challenging his know-how and his investigational skills. Prof. Dr. Brigit van der Werf-Messing, Chairman of the International TNM-Committee of the VICC. Preface In 1938 the League of Nations Health Organization published an Atlas illustrating the division of cancer of the uterine cervix into four stages according to the anatomo-clinical extent of the growth. Since this work appeared, the idea of visual representation of the anatomical extent of malignant tumours at the different stages of their development has been repeatedly discussed. At its meeting in Copenhagen in July 1954, the VICC adopted as part of its programme the realization of a clinical atlas. However, the time to do the planned illustration work was not ripe until the National Committees and international organizations had officially recognized the 28 classifications of malignant tumours at various sites as presented in the 3rd edition of the TNM Booklet (1978) edited by M. Harmer. This was all the more important since in 1980, in addition to the Booklet, a Brochure of Checklists edited by A.H. Sellers was made available as a further aid in the practical application of the TNM system

hx basal cell carcinoma icd 10: Management of Oral Cancers Sudhir Bahadur, Subramania Iyer, 2020-09-08 Tumor biology varies at different subsites in the oral cavity, and therefore carcinoma of the gingivo-buccal sulcus (also known as Indian cancer) behaves differently from carcinoma of the tongue. Oral cancer is very often diagnosed at an advanced stage with neck metastasis, and most cases have a guarded prognosis. Loco-regional recurrences are frequent and morbidity following treatment is considerable. However, results have improved in recent years, particularly in early and certain advanced stages, due to better imaging and case selection, improved surgical techniques, including those for reconstructive surgery, a multidisciplinary team approach and a better understanding of tumor biology and prognostic factors. This book comprehensively and systematically reviews all these aspects of diagnostic and therapeutic advances in oral cancer, particularly discussing early detection, epidemiology, chemoprevention and current research. Written by specialists who are active leaders in basic sciences or clinical fields, the chapters address individual and collective issues in managing patients with oral cancer, and provide insights into various treatment approaches. The authors share their knowledge and experience and provide extensive literature sources to encourage clinicians to be flexible, innovative and help them make the best, educated decisions for individual patients.
