mclaren factory woking: Mercedes-Benz Sport-Light Coupe Nik Greene, 2021-02-22 In the very beginning, the automotive industry was dominated by open-top vehicles whose body shapes were very much based on the horse-drawn carriage, there were open and closed carriages and then there was the Coupe. These were developed from the type of carriage known as the Berlin coach, which was designed as a classic vehicle for individual luxury travel and prestige. This type of carriage offered an intimate atmosphere focused exclusively on the passengers; it did not even have space for luggage, it simply exuded style, elegance and luxury in every way. This first volume of the Mercedes-Benz Coupe book addresses the journey from what was a functional sports car design to what has become the incomparable Mercedes-Benz 'Sports Coupe'; its timeless body design has remained, even today both a dream car and a dream Coupe to anyone whom aspires to follow in the footsteps of the early individualists who chose style and elegance over practicality. With over 300 photographs and illustrations, this book includes: an overview of the early days of 'Sports-Car' design; the influences of aerodynamics on design evolution; early protagonists at Daimler-Benz and how they influenced design of the Coupe shape; how the Racing Coupe influenced what became the production Sport Coupe; the experimental and one-off prototypes, and finally the continuation of the Super Sport Light concept through the 'S-Class' range.

mclaren factory woking: Manmade Modular Megastructures Ian Abley, Jonathan Schwinge, 2006-04-07 There will be 8.3 billion human beings on Earth by 2030, and the more the better. We have the opportunity to create a world of expansive megacities - including one around old London. Doing so will advance the art, science and processes of manufacturing. But to deploy those abilities we must shrug off the dogma of sustainability that insists only small can be beautiful. Humanity has come a long way since the first modular mega-structure was built at Ur, on land that is now Iraq. There, four millennia ago, and by hand, the Sumerians built a mud-brick ziggurat to their Gods. Today, the green deities of Nature we have invented for ourselves are worshipped with humility. Eco-zealots argue against the mechanised megaforming of landscape and the modularised production of megastructures. The guest editors, Jonathan Schwinge and Ian Abley of the London based research organisation audacity, call for development on a bold scale. They argue that by rapidly super-sizing the built environment society is not made vulnerable to natural or man-made hazards, and that design innovation surpasses bio-mimicry. Designers can learn from materials scientists working at the smallest of scales, and from systems manufacturers with ambitions at the largest. This issue calls for creative thinking about typologies and topologies, and considers what that also means for Africa, China, and Russia. Megacities everywhere demand integration of global systems of transport, utilities and IT in gigantic structures, constantly upgraded, scraping both the sky and the ground, outward into the sea.

mclaren factory working: Formula One: Made In Britain Clive Couldwell, 2012-05-31 Formula One: Made in Britain is one of Formula One's last untold stories. As a centre of technical excellence for over thirty years. Britain is at the sharp end of the worldwide motor sport industry, and playing ever harder to win. Most of the sport's Grand Prix teams are based in the UK and many of them have British managers and designers who act as a showcase for the UK's skill base - past, present and future. The success of Britain's Formula One industry has gone largely unrecognised outside the close-knit world of the racing aficionado. Now, with Formula One: Made in Britain, Clive Couldwell reveals what makes this industry tick and why many of the world's players choose to come here. He explores Motorsport Valley, an area which covers the south and Midlands of the UK, where 75 per cent of the world's single-seater racing cars are designed and built, and talks to many of F1's leading lights. Winning in F1 depends on innovation and performance-critical engineering, and in this fascinating and insightful book, Clive Couldwell show how UK research and development are leading the world.

mclaren factory working: Senna Versus Prost Malcolm Folley, 2009-05-07 In the late eighties and early nineties, Formula One was at its most explosive, with thrilling races, charismatic drivers, nail-biting climaxes - and the most deadly rivalry ever witnessed in sport. Two of Formula One's most honoured champions and iconic figures drove together for McLaren for two seasons, and their acrimonious and hostile relationship extended even after one of them had left the team. ALAIN PROST, France's only F1 world champion, the intelligent, smooth driver with the epithet 'Le Professeur'. Ayrton Senna, the mercurial kid from a privileged background in Sao Paulo who would become the most intense and ruthless racing driver the world has ever seen. It was a story that would have a tragic ending. As the great rivals raced to victory, their relationship deteriorated badly, beginning with the breaking of a gentleman's agreement, and public spats followed, culminating in Prost accusing Senna of deliberately trying to ride him off the circuit, and fearful that the Brazilian would get someone killed with his daring overtaking feats. And the final, sad act of this drama happened at the San Marino Grand prix at Imola in May 1994, when Senna was killed. Featuring a rare interview with Prost, and insight from Martin Brundle, Damon Hill, Sir Frank Williams, Bernie Ecclestone, Derek Warwick, Johnny Herbert, Gerhard Berger, plus McLaren insiders and other F1 figures, Malcolm Folley provides us with a breath-taking account of one of the all-time classic sporting rivalries.

mclaren factory working: Grand Prix Cars Denis Jenkinson, 2015-10-02 " In compiling this brief history of Grand Prix racing, along with descriptions of the more successful cars, I have limited myself to the period since World War II as the present day Grand Prix cars are mostly derived from the development and design of the early post war years. Although many ideas were taking shape in the period of the mid-thirties — such as the use of De Dion rear axle layouts, independent front suspension systems and hydraulic brakes — the main interest lay in engine design under a free ruling on capacity. It was not until about 1950 that a renaissance began in chassis design for Grand Prix cars and from then on a great deal of knowledge was gained; enough in fact, to enable roadholding to become a very exact science rather than a hit-and-miss affair. This development in the chassis and the search for improved road holding and higher cornering power was accentuated by the beginning of the era of unsupercharged racing, when power outputs were severely curtailed and speed had to be found by other means ..." mclaren factory working: Racing Green: THE RAC MOTORING BOOK OF THE YEAR Kit Chapman, 2022-03-03 Racing Green is the story of how motorsport science has become smarter and more environmentally friendly, and how these developments on the track are changing the world. Motor racing is one of the world's most watched sports. In the United States alone, NASCAR has over 75 million fans and counting. It's also the most scientifically demanding sport on Earth, requiring a combination of peak physical and mental skill, world-class engineers and a constant drive for technological innovation. Racing Green explores the science that has been translated from racing to the road, from the early 19th century through to innovations such as electric cars and autonomous vehicles. The history of motor racing, both its glories and its tragedies, led to some of the most important modern developments we see in car design today. Just as the heartbreaking death of Dale Earnhardt at the Daytona 500 led NASCAR to introduce a new raceway barrier method, ideas pioneered during races - such as crush zones to crash helmets - have been incorporated into race car and track designs around the world. Cleaner technologies first trialed and improved in modern racing are also shaping our communities beyond the track, from the hidden aerodynamics in everything from your grocery aisle to Apple's new \$5 billion headquarters to a Porsche made from flax and tires made from dandelions. Through exclusive interviews with NASCAR's Research and Development Center, Formula 1 insiders, engineers, scientists and drivers, lifelong motorsport fan Kit Chapman goes behind the scenes of the current breakthroughs to show where motorsport is likely to take us in the future, picking up extraordinary tales along the way, such as the Ohio State University's experimental electric car, the Buckeye Bullet, which broke the electric land speed record on the salt flats in Utah, hitting an astounding 340 mph, and the untold story of how motorsport used its unparalleled mechanical expertise to help during the COVID-19 pandemic. Racing Green is a mix of travelogue and historical retrospective, combining visits to the experts and discussing the science with retellings of real-life incidents that represent milestones in shaping the modern world
