## **New Journal Physics Impact Factor: A Comprehensive Guide**

### Introduction:

Are you a researcher navigating the complex world of academic publishing? Understanding the impact factor of a journal is crucial for maximizing the visibility and influence of your work. This comprehensive guide dives deep into the intricacies of the New Journal of Physics (NJP) impact factor, providing you with the knowledge you need to make informed decisions about your publication strategy. We'll explore what constitutes an impact factor, dissect the NJP's current and historical impact metrics, analyze its strengths and weaknesses, and offer guidance on how to best leverage this prestigious journal for your career advancement. Whether you're a seasoned researcher or just starting out, this post will equip you with the essential information to succeed in the competitive landscape of scientific publishing.

### Understanding Journal Impact Factors

Before we delve into the specifics of the New Journal of Physics impact factor, let's establish a foundational understanding of what this metric represents. The impact factor, often abbreviated as IF, is a quantitative measure reflecting the average number of citations received per paper published in a particular journal during a specific period (typically the previous two years). A higher impact factor generally indicates greater influence and prestige within the scientific community. It's important to remember, however, that the impact factor is just one metric among many, and shouldn't be the sole determinant when choosing a journal for your research. Other factors to consider include the journal's scope, audience, and reputation.

### The New Journal of Physics (NJP) Impact Factor: A Detailed Analysis

The New Journal of Physics is a highly regarded open-access journal publishing high-quality research across a broad spectrum of physics. Its impact factor fluctuates yearly, reflecting the dynamic nature of scientific citation patterns. To gain a comprehensive understanding, we must examine its historical trends and consider the factors influencing its IF. Accessing the most current IF requires checking reputable sources such as Journal Citation Reports (JCR) published by Clarivate Analytics. Keep in mind that the JCR's methodology and calculation can be complex, and simply comparing numerical values between journals across different fields may be misleading. Context is key.

### Factors Influencing the NJP Impact Factor:

Several factors contribute to the New Journal of Physics's impact factor. These include:

**The Quality of Published Research:** NJP's rigorous peer-review process ensures only high-quality research is published, leading to more citations.

**Journal Scope and Audience:** The journal's broad scope attracts researchers from diverse subfields within physics, resulting in a wider potential audience for cited articles.

**Open Access Model:** NJP's open-access model facilitates greater accessibility and visibility,

potentially increasing citations.

Citation Practices within Physics: Citation practices vary across disciplines. Physics, as a field, may exhibit particular patterns influencing the NJP's IF.

Self-Citation: While generally discouraged, the presence of self-citations can artificially inflate an impact factor; understanding how this impacts the NJP's IF is important.

### Interpreting the NJP Impact Factor in Context:

It's crucial to interpret the NJP's impact factor within the context of its field. Direct comparison to journals in other disciplines (e.g., biology or chemistry) is inappropriate. The impact factor should be considered alongside other qualitative factors like the journal's reputation, editorial board, and the relevance of its scope to your research.

### Strengths and Weaknesses of Publishing in NJP:

#### Strengths:

High Visibility: Open access ensures wider readership.

Prestige: NJP is a well-respected journal within the physics community.

Rigorous Peer Review: Ensures high-quality publications.

Broad Scope: Accommodates research across many physics areas.

#### Weaknesses:

Competition: Acceptance rates can be highly competitive.

Publication Fees: Open access requires author-paid publication fees.

Impact Factor Fluctuation: The IF isn't static and can vary year to year.

### Strategic Considerations for Authors:

Choosing the right journal for your research is a crucial decision. When considering NJP, carefully weigh the strengths and weaknesses, focusing on alignment with your research goals and career trajectory. While a high impact factor is desirable, prioritize publishing in a journal that best suits your work's scope and audience.

### Beyond the Impact Factor: Other Key Metrics:

While the impact factor is widely recognized, it's not the sole indicator of a journal's influence. Other important metrics include:

Altmetrics: These measure the broader impact of research beyond traditional citations, such as social media mentions and downloads.

Citation half-life: This indicates how long papers in the journal continue to receive citations.

Eigenfactor: A metric attempting to account for the influence of citing journals.

### Book Outline: "Navigating the New Journal of Physics: A Researcher's Guide"

#### I. Introduction:

Defining the Impact Factor and its relevance to researchers

Overview of the New Journal of Physics and its significance in the field of physics

The structure and objectives of this guide

## II. Understanding Journal Impact Factors:

In-depth explanation of impact factor calculation and interpretation

Exploring the limitations and biases associated with impact factors

Alternative metrics to evaluate journal performance

## III. The New Journal of Physics: A Deep Dive:

Historical analysis of NJP's impact factor trends

Factors influencing NJP's impact factor (quality of research, scope, open access, citation practices)

Strengths and weaknesses of publishing in NJP

Case studies of successful and unsuccessful publications in NJP

## IV. Strategic Decision Making:

A step-by-step guide on selecting the appropriate journal for your research

Considering factors beyond the impact factor (audience, scope, peer-review process)

Balancing career goals with publication choices

Advice on maximizing the impact of your publications

## V. Conclusion:

Recap of key takeaways

Emphasizing the importance of holistic journal selection

Future trends in academic publishing and their implications for researchers

(Each chapter above would be expanded into a detailed section within the full book. The content provided previously would be incorporated and expanded upon.)

## Frequently Asked Questions (FAQs):

1. What is the current impact factor of the New Journal of Physics? The current impact factor needs to be checked on a reputable source like the Journal Citation Reports (JCR) as it changes annually.

2. Is the NJP impact factor high compared to other physics journals? Its ranking relative to other physics journals varies yearly and depends on the specific subfield. Comparison should always be made within the same physics sub-discipline.

3. How does the open-access model affect the NJP impact factor? Open access generally increases visibility and potential readership, potentially positively impacting the impact factor, but it's not the sole determining factor.

4. Does the NJP impact factor reflect the true value of published research? No, the impact factor is just one metric and doesn't capture the full picture of a paper's influence or value.

5. What are some alternative metrics to consider beyond the impact factor? Altmetrics (social media mentions, downloads) and citation half-life are useful supplementary metrics.

6. How competitive is it to publish in NJP? Publication in NJP is highly competitive due to its prestige and rigorous peer-review process.

7. What are the publication fees for NJP? Publication fees vary; check the journal's website for the most up-to-date information.

8. Should I choose NJP solely based on its impact factor? No, consider the journal's suitability to your specific research, audience, and career goals.

9. Where can I find more information about the NJP submission guidelines? Visit the official New Journal of Physics website for complete submission guidelines and author instructions.

**new journal physics impact factor:** Sustainable Soil Management Deirdre Rooney, 2013-03-22 Changing land-use practices and the role of soil biological diversity has been a major focus of soil science research over the past couple of decades—a trend that is likely to continue. The information presented in this book points to a holistic approach to soil management. The first part looks at the land use effects on soil carbon storage, and considers a range of factors including carbon sequestration in soils. The second part of the book presents research investigating the interactions between soil properties, plant species, and the soil biota.

**new journal physics impact factor:** Plasma Catalysis Annemie Bogaerts, 2019-04-02 Plasma catalysis is gaining increasing interest for various gas conversion applications, such as CO<sub>2</sub> conversion into value-added chemicals and fuels, N<sub>2</sub> fixation for the synthesis of NH<sub>3</sub> or NO<sub>x</sub>, methane conversion into higher hydrocarbons or oxygenates. It is also widely used for air pollution control (e.g., VOC remediation). Plasma catalysis allows thermodynamically difficult reactions to proceed at ambient pressure and temperature, due to activation of the gas molecules by energetic electrons created in the plasma. However, plasma is very reactive but not selective, and thus a catalyst is needed to improve the selectivity. In spite of the growing interest in plasma catalysis, the underlying mechanisms of the (possible) synergy between plasma and catalyst are not yet fully understood. Indeed, plasma catalysis is quite complicated, as the plasma will affect the catalyst and vice versa. Moreover, due to the reactive plasma environment, the most suitable catalysts will probably be different from thermal catalysts. More research is needed to better understand the plasma-catalyst interactions, in order to further improve the applications.

**new journal physics impact factor:** Anxiety and the Equation Eric Johnson, 2018-10-23 A man and his equation: the anxiety-plagued nineteenth-century physicist who contributed significantly to our understanding of the second law of thermodynamics. Ludwig Boltzmann's grave in Vienna's Central Cemetery bears a cryptic epitaph:  $S = k \log W$ . This equation was Boltzmann's great discovery, and it contributed significantly to our understanding of the second law of thermodynamics. In *Anxiety and the Equation*, Eric Johnson tells the story of a man and his equation: the anxiety-plagued nineteenth-century physicist who did his most important work as he struggled with mental illness. Johnson explains that “S” in Boltzmann's equation refers to entropy, and that entropy is the central quantity in the second law of thermodynamics. The second law is always on, running in the background of our lives, providing a way to differentiate between past and future. We know that the future will be a state of higher entropy than the past, and we have Boltzmann to thank for discovering the equation that underlies that fundamental trend. Johnson, accessibly and engagingly, reassembles Boltzmann's equation from its various components and presents episodes from Boltzmann's life—beginning at the end, with “Boltzmann Kills Himself” and “Boltzmann Is Buried (Not Once, But Twice).” Johnson explains the second law in simple terms, introduces key concepts through thought experiments, and explores Boltzmann's work. He argues that Boltzmann, diagnosed by his contemporaries as neurasthenic, suffered from an anxiety disorder. He was, says Johnson, a man of reason who suffered from irrational concerns about his work, worrying especially about opposition from the scientific establishment of the day. Johnson's clear and concise explanations will acquaint the nonspecialist reader with such seemingly esoteric concepts as microstates, macrostates, fluctuations, the distribution of energy, log functions, and equilibrium. He describes Boltzmann's relationships with other scientists, including Max Planck and Henri Poincaré, and, finally, imagines “an alternative ending,” in which Boltzmann lived on and died of natural causes.

**new journal physics impact factor:** Demystifying Scholarly Metrics Marc W. Vinyard, Jaimie Beth Colvin, 2022-02-25 Demystifying Scholarly Metrics gives librarians and faculty the confidence to navigate the maze of scholarly metrics, identify quality journals in which to publish,

and measure the impact of scholarly works. Both librarians and professors can be overwhelmed by the bewildering number of scholarly metrics. This user-friendly book demystifies them, helping librarians become familiar with scholarly metrics and giving them the confidence to assist faculty at their institutions. It also equips faculty authors with the knowledge to evaluate journals and use metrics to track their scholarly impact. Several controversies exist in the scholarly metrics landscape, including a disagreement between the proponents of altmetrics and traditional bibliometrics. Even more contentious debates are breaking out over predatory journals and open access publishing. Authors Mark Vinyard and Jaimie Beth Colvin, who successfully launched a faculty publishing initiative, explain which aspects of metrics are truly essential to grasp, and they place these numbers in context. They help readers identify the metrics that are the best fit for their scholarship and give librarians and professors the tools to make smart decisions in this changing scholarly metrics landscape.

**new journal physics impact factor: Quantum Gases** Nick Proukakis, 2013 This volume provides a broad overview of the principal theoretical techniques applied to non-equilibrium and finite temperature quantum gases. Covering Bose-Einstein condensates, degenerate Fermi gases, and the more recently realised exciton-polariton condensates, it fills a gap by linking between different methods with origins in condensed matter physics, quantum field theory, quantum optics, atomic physics, and statistical mechanics.

**new journal physics impact factor: Multidimensional Journal Evaluation** Stefanie Haustein, 2012-04-26 Scientific communication depends primarily on publishing in journals. The most important indicator to determine the influence of a journal is the Impact Factor. Since this factor only measures the average number of citations per article in a certain time window, it can be argued that it does not reflect the actual value of a periodical. This book defines five dimensions, which build a framework for a multidimensional method of journal evaluation. The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011.

**new journal physics impact factor: Characterization of Semiconductor Heterostructures and Nanostructures** Giovanni Agostini, Carlo Lamberti, 2013-04-11 Characterization of Semiconductor Heterostructures and Nanostructures is structured so that each chapter is devoted to a specific characterization technique used in the understanding of the properties (structural, physical, chemical, electrical etc..) of semiconductor quantum wells and superlattices. An additional chapter is devoted to ab initio modeling. The book has two basic aims. The first is educational, providing the basic concepts of each of the selected techniques with an approach understandable by advanced students in Physics, Chemistry, Material Science, Engineering, Nanotechnology. The

second aim is to provide a selected set of examples from the recent literature of the TOP results obtained with the specific technique in understanding the properties of semiconductor heterostructures and nanostructures. Each chapter has this double structure: the first part devoted to explain the basic concepts, and the second to the discussion of the most peculiar and innovative examples. The topic of quantum wells, wires and dots should be seen as a pretext of applying top level characterization techniques in understanding the structural, electronic etc properties of matter at the nanometer (and even sub-nanometer) scale. In this respect it is an essential reference in the much broader, and extremely hot, field of Nanotechnology. Comprehensive collection of the most powerful characterization techniques for semiconductors heterostructures and nanostructures Most of the chapters are authored by scientists that are world-wide among the top-ten in publication ranking of the specific field Each chapter starts with a didactic introduction on the technique The second part of each chapters deals with a selection of top examples highlighting the power of the specific technique to analyse the properties of semiconductors heterostructures and nanostructures

**new journal physics impact factor: Are Chemical Journals Too Expensive and Inaccessible?**

National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Chemical Sciences Roundtable, 2005-06-09 On October 25-26, 2005, the Chemical Sciences Roundtable held a workshop to explore issues involving those who use and contribute to chemical literature, as well as those who publish and disseminate chemical journals. As a follow-up to the workshop, a summary was written to capture the presentations and discussions that occurred during the workshop. As a forum to discuss chemistry journals within the larger context of scientific, technical and medical journal publishing, the workshop covered whether chemists and chemical engineers have unique journal needs and, if so, whether these needs are being met in the current journal publishing environment. Workshop participants also tackled how open access publishing might be applied to the chemical literature, such as to provide authors more freedom to distribute their articles after publication and allowing free access to chemical literature archives.

**new journal physics impact factor: *Neoteric Developments in Management Science in Engineering*** Jiuping Xu, 2023-04-24 Management science in engineering (MSE) is becoming increasingly important in modern society. In particular, the emergence of efficient and innovative management tools has greatly influenced the progress of management science in engineering research. As research is critical to the dissemination of cutting-edge methods, journal evaluation and classification are essential for scientists, researchers, engineers, practitioners, and graduate students. The goal of this book is to identify the major research categories in MSE and to evaluate and classify each MSE journal. This book was compiled through the combined efforts of members of scientific committees (many of whom are editors-in-chief of the most relevant journals), academics, researchers from different countries, and members of professional societies. It will be of interest to scientists, researchers, practitioners, engineers, graduate and advanced undergraduate students in the fields of engineering management, civil engineering, industrial engineering, environmental engineering, energy engineering, information engineering, and agricultural engineering.

**new journal physics impact factor: *Organizational Network Analysis*** Anna Ujwary-Gil, 2019-12-03 The integrated meta-model for organizational resource audit is a consistent and comprehensive instrument for auditing intangible resources and their relations and associations from the network perspective. This book undertakes a critically important problem of management sciences, poorly recognized in literature although determining the current and future competitiveness of enterprises, sectors and economies. The author notes the need to introduce a theoretical input, which is manifested by the meta-model. An expression of this treatment is the inclusion of the network as a structure of activities, further knowledge as an activity, and intangible assets as intellectual capital characterized by a structure of connections. The case study presented is an illustration of the use of network analysis tools and other instruments to identify not only the most important resources, tasks or actors, as well as their effectiveness, but also to connect the

identified networks with each other. The author opens the field for applying her methodology, revealing the structural and dynamic features of the intangible resources of the organization. The novelty of the proposed meta-model shows the way to in-depth applications of network analysis techniques in an intra-organizational environment. Organizational Network Analysis makes a significant contribution to the development of management sciences, in terms of strategic management and more strictly resource approach to the company through structural definition of knowledge; application of the concept of improvement-oriented audit abandoning a narrow understanding of this technique in terms of compliance; reliable presentation of audits available in the literature; rigorous reasoning leading to the development of a meta-model; close linking of knowledge and resources with the strategy at the design stage of the developed audit model, including the analysis of link dynamics and networks together with an extensive metrics proposal; an interesting illustration of the application with the use of metrics, tables and charts. It will be of value to researchers, academics, managers, and students in the fields of strategic management, organizational studies, social network analysis in management, knowledge management, and auditing knowledge resources in organizations.

**new journal physics impact factor:** *Springer Handbook of Science and Technology Indicators* Wolfgang Glänzel, Henk F. Moed, Ulrich Schmoch, Mike Thelwall, 2019-10-30 This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system. Focusing on various aspects of the development and application of indicators derived from data on scholarly publications, patents and electronic communications, the individual chapters, written by leading experts, discuss theoretical and methodological issues, illustrate applications, highlight their policy context and relevance, and point to future research directions. A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources, presenting both traditional and advanced approaches. It addresses the main bibliographic metrics and indexes, such as the journal impact factor and the h-index, as well as altmetric and webometric indicators and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance as well as their impact on research policy and society. It also presents and critically discusses various national research evaluation systems. Complementing the sections reflecting on the science system, the technology section includes multiple chapters that explain different aspects of patent statistics, patent classification and database search methods to retrieve patent-related information. In addition, it examines the relevance of trademarks and standards as additional technological indicators. The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners, scientists and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance.

**new journal physics impact factor:** *Thermal Physics and Thermal Analysis* Jaroslav Šesták, Pavel Hubík, Jiří J. Mareš, 2017-03-24 Features twenty-five chapter contributions from an international array of distinguished academics based in Asia, Eastern and Western Europe, Russia, and the USA. This multi-author contributed volume provides an up-to-date and authoritative overview of cutting-edge themes involving the thermal analysis, applied solid-state physics, micro- and nano-crystallinity of selected solids and their macro- and microscopic thermal properties. Distinctive chapters featured in the book include, among others, calorimetry time scales from days to microseconds, glass transition phenomena, kinetics of non-isothermal processes, thermal inertia and temperature gradients, thermodynamics of nanomaterials, self-organization, significance of temperature and entropy. Advanced undergraduates, postgraduates and researchers working in the field of thermal analysis, thermophysical measurements and calorimetry will find this contributed volume invaluable. This is the third volume of the triptych volumes on thermal behaviour of materials; the previous two receiving thousand of downloads guaranteeing their worldwide impact.

**new journal physics impact factor:** *Fundamental Biomaterials: Metals* Preetha Balakrishnan, M.S. Sreekala, Sabu Thomas, 2018-07-19 Fundamental Biomaterials: Metals provides

current information on the development of metals and their conversion from base materials to medical devices. Chapters analyze the properties of metals and discuss a range of biomedical applications, with a focus on orthopedics. While the book will be of great use to researchers and professionals in the development stages of design for more appropriate target materials, it will also help medical researchers understand, and more effectively communicate, the requirements for a specific application. With the recent introduction of a number of interdisciplinary bio-related undergraduate and graduate programs, this book will be an appropriate reference volume for students. It represents the second volume in a three volume set, each of which reviews the most important and commonly used classes of biomaterials, providing comprehensive information on materials properties, behavior, biocompatibility and applications. - Provides current information on metals and their conversion from base materials to medical devices - Includes analyses of types of metals, discussion of a range of biomedical applications, and essential information on corrosion, degradation and wear and lifetime prediction of metal biomaterials - Explores both theoretical and practical aspects of metals in biomaterials

**new journal physics impact factor: *Altmetrics for Information Professionals*** Kim Johan Holmberg, 2015-09-03 The goal of any research assessment is to evaluate the value or quality of the research in comparison to other research. As quality is highly subjective and difficult to measure, citations are used as a proxy. Citations are an important part of scholarly communication and a significant component of research evaluation, with the assumption being that highly cited work has influenced the work of many other researchers and hence it is more valuable. Recently we have seen new online data sources being researched for this purpose and disruptive ideas with the power to change research assessment, and perhaps even science as a whole, have been born. Altmetrics is the new research area that investigates the potential of these new data source as indicators of the impact that research has made on the scientific community and beyond, and thus possibly also as indicators of the societal impact of research. This book will present some of these new data sources, findings from earlier altmetrics research, and the disruptive ideas that may radically change scholarly communication. - Presents some of the key ideas and innovations in earlier research that have been driving the evolution from bibliometrics to webometrics, and with the advent of social media to altmetrics - Discusses the shortcomings and pitfalls of bibliometrics in research evaluation and the potential of altmetrics to overcome some of these shortcomings - Presents some of the most important data sources of altmetrics, the aggregators, and the different stakeholders - Reviews current research about altmetrics and discusses possible future trends - Presents a way to measure and aggregate altmetrics according to the level of impact or type of impact they represent

Graphene and its nanocomposites are promising multifunctional materials with improved tensile strength and elastic modulus. graphene nanocomposites may have a wide range of potential applications due to their outstanding properties and the low cost of graphene. Because graphene composites have a controllable porous structure, a large surface area, high conductivity, high-temperature stability, excellent anti-corrosion properties, and composite compatibility, they can be used in energy storage as electrocatalysts, electro-conductive additives, intercalation hosts, and an ideal substrate for active materials. Shortly, graphene will be a base for the next generation's scientific revolution.

**new journal physics impact factor: *Science Evaluation and Its Management*** Václav Pačes, Ladislav Pivec, Albert H. Teich, 1999 Evaluation of scientific research, particularly of research which is supported by government funds, is a matter of growing concern in virtually every nation. It is no longer adequate to expect that the value of investments in research will be judged in long-term historical perspective. Resources are scarce and policy-makers are looking for ways to assure that these resources are used in the most effective way. From the life-or-death evaluations of academic research institutes in the post-communist countries to the Government Performance and Results Act(GPRA) in the United States, research evaluation has become a topic of utmost importance in

science policy. Evaluation often has substantial consequences for researchers and research institutions, including restructuring, shifting of priorities, budget reductions, or even closures. Therefore it is essential that evaluation is done systematically and objectively, with methodologies that can be understood and trusted by those concerned. This book is based on a NATO Advanced Research Workshop, co-organized by the Academy of Sciences of the Czech Republic and the American Association for the Advancement of Science. It describes a range of the most up-to-date methods of science evaluation and the experience with their implementation in many countries. This book can be of interest to researchers, policy-makers, practitioners of science evaluation and many others interested in science policy.

**new journal physics impact factor:** *Carbon Nanotubes and Nanosensors* Isaac Elishakoff, Kevin Dujat, Giuseppe Muscolino, Simon Bucas, Toshiaki Natsuki, Chien Ming Wang, Demetris Pentaras, Claudia Versaci, Joel Storch, Noël Challamel, Yingyan Zhang, Guillaume Ghyselinck, 2013-03-04 The main properties that make carbon nanotubes (CNTs) a promising technology for many future applications are: extremely high strength, low mass density, linear elastic behavior, almost perfect geometrical structure, and nanometer scale structure. Also, CNTs can conduct electricity better than copper and transmit heat better than diamonds. Therefore, they are bound to find a wide, and possibly revolutionary use in all fields of engineering. The interest in CNTs and their potential use in a wide range of commercial applications; such as nanoelectronics, quantum wire interconnects, field emission devices, composites, chemical sensors, biosensors, detectors, etc.; have rapidly increased in the last two decades. However, the performance of any CNT-based nanostructure is dependent on the mechanical properties of constituent CNTs. Therefore, it is crucial to know the mechanical behavior of individual CNTs such as their vibration frequencies, buckling loads, and deformations under different loadings. This title is dedicated to the vibration, buckling and impact behavior of CNTs, along with theory for carbon nanosensors, like the Bubnov-Galerkin and the Petrov-Galerkin methods, the Bresse-Timoshenko and the Donnell shell theory.

**new journal physics impact factor:** *Designing the Microbial Research Commons* National Research Council, Policy and Global Affairs, Board on Research Data and Information, 2010-10-30 Recent decades have witnessed an ever-increasing range and volume of digital data. All elements of the pillars of science-whether observation, experiment, or theory and modeling-are being transformed by the continuous cycle of generation, dissemination, and use of factual information. This is even more so in terms of the re-using and re-purposing of digital scientific data beyond the original intent of the data collectors, often with dramatic results. We all know about the potential benefits and impacts of digital data, but we are also aware of the barriers, the challenges in maximizing the access, and use of such data. There is thus a need to think about how a data infrastructure can enhance capabilities for finding, using, and integrating information to accelerate discovery and innovation. How can we best implement an accessible, interoperable digital environment so that the data can be repeatedly used by a wide variety of users in different settings and with different applications? With this objective: to use the microbial communities and microbial data, literature, and the research materials themselves as a test case, the Board on Research Data and Information held an International Symposium on Designing the Microbial Research Commons at the National Academy of Sciences in Washington, DC on 8-9 October 2009. The symposium addressed topics such as models to lower the transaction costs and support access to and use of microbiological materials and digital resources from the perspective of publicly funded research, public-private interactions, and developing country concerns. The overall goal of the symposium was to stimulate more research and implementation of improved legal and institutional models for publicly funded research in microbiology.
