penn state multimedia print center: Spatial Multimedia and Virtual Reality Antonio S. Camara, Jonathan Raper, 2021-04-29 The intersection of two disciplines and technologies which have become mature academic research topics in the 1990s was destined to be a dynamic area for collaboration and publication. However, until now no significant book-length treatment of the meeting of GIS and Virtual Reality has been available. This volume puts that situation to rights by bringing these together to cement some common understanding and principles in a potentially highly promising area for technological collaboration and cross-fertilisation. The result is a volume which ranges in subject matter from studies of a Virtual GIS Room to Spatial Agents, and from an Environmental Multimedia System to Computer-Assisted 3D Geographic Education. All the contributors are well-known international scientists, principally from the computational side of GIS. It will be a valuable resource for any GIS researcher or professional looking to understand the leading edge of this fertile field.

penn state multimedia print center: Distributed Multimedia Information Retrieval Jamie Callan, Fabio Crestani, 2004-01-26 During recent years, huge efforts have been made to establish digital libraries, in a variety of media, offered from a variety of sources, and intended for a variety of professional and private user communities. As digital data collections proliferate, problems of resource selection and data fusion become major issues. Traditional search engines, even the best ones, are unable to provide access to the hidden web of information that is only available via digital library search interfaces. Originating from the SIGIR 2003 Workshop on Distributed Information Retrieval, held in Toronto, Canada in August 2003, this book presents extended and revised workshop papers as well as several invited papers on the topic to round off coverage of the core issues. The papers are devoted to recent research on the design and implementation of methods and tools for resource discovery, resource description, resource selection, data fusion, and user interaction.

In spite of the doom and gloom predicted in the press for the future of libraries, these institutions aren't at the top of the endangered species list just yet. Librarians who are focusing significant attention and staffing resources on undergraduates—and are thinking creatively about what engages this specific group of students—are forging the future for academic libraries. *Student Engagement and the Academic Library* explores how initiatives that involve high impact educational practices and other creative programs can effectively engage undergraduate students with academic libraries. The methodologies described in this work serve to draw students in and make their learning meaningful, both through curricular initiatives as well as through co-curricular and self-initiated activities, disciplinary initiatives, and partnerships across the university. This book will benefit any librarian seeking to further engage their college-age student populations, and will be especially helpful to libraries that are struggling to establish their programs and initiatives with today's students.

Kapp, Tony O'Driscoll, 2009-12-30 Praise for Learning in 3D Learning is the key to our future and powerful learning will result from immersive, interactive, and creative 3D designs. Tony O'Driscoll and Karl Kapp have written a disruptive book about a disruptive technology that we all need to explore. This is a must read! Elliott Masie, chair, The Learning CONSORTIUM Karl Kapp and Tony O'Driscoll are, amazingly, both the best theorists and practitioners in using virtual worlds in every type of educational venue. Many will love their vision, but I am more hooked on their practicality and hand-holding. Clark Aldrich, author, Learning Online with Games, Simulations, and Virtual Worlds: Strategies for Online Instruction Kapp and O'Driscoll nailed it. The right balance of case studies, theories and practical advice for any organization pursuing the use of virtual worlds for learning. If you are interested in virtual worlds for learning and collaboration, this book is for you. David A. Manning, managing partner, Performance Development Group The big contribution of Learning in 3D is that it provides research informed guidance and practical tips and techniques for using 3D virtual environments to achieve real business results...the case studies are outstanding. Lisa Clune, president, Kaplan EduNeering As the world makes its way through a period of significant change, Learning in 3D couldn't come at a better time. Today, organizations and individuals are being challenged to make the most of learning collaboratively. This book stimulates our thinking on how to maximize the impact of technology, while providing a practical blueprint with 'revolutionary' examples of how to bring a new dimension to learning. John Malitoris, regional managing director, Duke Corporate Education Tony O'Driscoll and Karl Kapp remind us that learning is the fourth dimension and the one that really counts in collaboration. A must-read for the future of learning in environments virtual and otherwise. Cathy Davidson, Ruth F. DeVarney Professor of English at Duke University and co-director HASTAC/MacArthur Foundation Digital Media and Learning Competition.

Educational technology, especially computers and computer related peripherals have grown tremendously and have permeated all areas of our lives. Given the vital role of technology in today's world this critical issue will examine the value of effective technology use in classrooms curriculum. Educational technology is a field involved in the facilitation of human learning through systematic identification, development, organization and utilization of a full-range of learning resources and through the management of these processes. Educational technology is a complex, integrated process involving people, procedures, ideas, devices and organization for analyzing problems and devising, implementing, evaluating and managing solutions to those problems involved in all aspects of human learning. Instructional technology is the theory and practice of design, development, utilization, management and evaluation of processes and resources for learning. Curriculum can be envisaged from different perspectives. What societies envisage as important teaching and learning constitutes the e;intendede; curriculum. Information and communication technology has quickly become a key part of the infrastructure of classrooms and schools. From preschool to higher education, computers, laptops, smartphones, smart boards and tablets are powerful mediums through which to get information and communicate. In the 21st century, technology plays a role in every facet of education as students, teachers and administrators turn to their computers to access information, create and express themselves, communicate and collaborate, and track the achievement of learning outcomes.

penn state multimedia print center: Digital Lifeline? Carleen Maitland, 2018-05-04 Interdisciplinary perspectives on the role of new information technologies, including mobile phones, wireless networks, and biometric identification, in the global refugee crisis. Today's global refugee crisis has mobilized humanitarian efforts to help those fleeing persecution and armed conflict at all stages of their journey. Aid organizations are increasingly employing new information technologies in their mission, taking advantage of proliferating mobile phones, remote sensors, wireless networks, and biometric identification systems. Digital Lifeline? examines the use of these technological innovations by the humanitarian community, exploring operations and systems that range from forecasting refugee flows to providing cellular and Internet connectivity to displaced persons. The contributors, from disciplines as diverse as international law and computer science, offer a variety of perspectives on forced migration, technical development, and user behavior, drawing on field work in countries including Jordan, Lebanon, Rwanda, Germany, Greece, the United States, and Canada. The chapters consider such topics as the use of information technology in refugee status determination; ethical and legal issues surrounding biometric technologies; information technology within organizational hierarchies; the use of technology by refugees; access issues in refugee camps; the scalability and sustainability of information technology innovations in humanitarian work; geographic information systems and spatial thinking; and the use of "big data" analytic techniques. Finally, the book identifies policy research directions, develops a unified research agenda, and offers practical suggestions for conducting displacement research. penn state multimedia print center: *IT Roadmap to a Geospatial Future* National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Intersections Between Geospatial Information and Information Technology, 2003-05-04 A grand challenge for science is to understand the human implications of global environmental change and to help society cope with those changes. Virtually all the scientific questions associated with this challenge depend on geospatial information (geoinformation) and on the ability of scientists, working individually and in groups, to interact with that information in flexible and increasingly complex ways. Another grand challenge is how to respond to calamities-terrorist activities, other human-induced crises, and natural disasters. Much of the information that underpins emergency preparedness, response, recovery, and mitigation is geospatial in nature. In terrorist situations, for example, origins and destinations of phone calls and e-mail messages, travel patterns of individuals, dispersal patterns of airborne chemicals, assessment of places at risk, and the allocation of resources all involve geospatial information. Much of the work addressing environment- and emergency-related concerns will depend on how productively humans are able to integrate, distill, and correlate a wide range of seemingly unrelated information. In addition to critical advances in location-aware computing, databases, and data mining methods, advances in the human-computer interface will couple new computational capabilities with human cognitive capabilities. This report outlines an interdisciplinary research roadmap at the intersection of computer science and geospatial information science. The report was developed by a committee convened by the Computer Science and Telecommunications Board of the National Research Council.
