remnant 2 media questions: Questions in Daily Urologic Practice Ryoichi Oyasu, Ximing J. Yang, Osamu Yoshida, 2009-02-21 The principal role of the diagnostic surgical pathologist is to serve a patient by assisting the clinician in charge of the patient's care. In that capacity, the pathologist provides the vital information that should be directly and indirectly useful in guiding the clinician toward the most appropriate therapy. The material pathologists receive most commonly is a biopsy or a part of an organ removed after a definitive procedure. To extract useful information, pathological evaluation proceeds according to a set of guidelines. Simply reporting a diagnosis of cancer is inadequate. Detailed additional information is needed so that the clinician can go on to establish a therapeutic plan as needed. To best serve the patient, close interaction between the clinician and the pathologist is vital. In the field of urological pathology, there are problems specific to this system. Typically, in the prostate, because of its location, there is little room for a surgeon to work to obtain adequate resection margins, unlike with many other organs. As a result, questions arise such as What constitutes an adequate surgical margin? What is the significance of extraprostatic extension of neoplasm that is still inside the resection margin? and What is the significance of neoplastic glands found on the resection margin marked with the ink? It has been shown that a prostate needle core biopsy can generate much information that is immediately useful in predicting the extent of cancer in the prostate and, consequently, the outcome for the patient.

remnant 2 media questions: Old and New Questions in Physics, Cosmology, Philosophy, and Theoretical Biology Alwyn Van der Merwe, 2012-12-06 Simply to say that this is a collection of essays in honor of the late Wolfgang Yourgrau (1908-1979) is to explain, at least for the obviously many-insiders, the unusually wide-ranging title of the present volume. In a Foreword to the Proceedings of the First International Colloquium (focusing on logic, physical reality, and history), held at the University of Denver in May of 1966 under their leadership, Wolfgang Yourgrau and Allen Breck wrote, in an oblique reference to C. P. Snow: Indeed there are not two or three or four cultures: there is only one culture; our generation has lost its awareness of this Historians, logicians, physicists—all are banded in one common enterprise, namely in their desire to weave an enlightened fabric of human knowledge. Augment, if you will, the foregoing categories of scholars with biologists, philosophers, cosmologists, and theologians—all of whom, in addition to historians, Wolfgang Yourgrau, by dint of his inextinguishable enthusiasm and charismatic qualities, assembled in Denver for the Second and Third International Colloquia (in 1967 and 1974, respectively)—and a few other besides, and one arrives at a statement of the credo which Yourgrau not only professed, but consistently exemplified throughout his adult life.

remnant 2 media questions: Water Treatment Unit Processes David W. Hendricks, 2018-10-03 The unit process approach, common in the field of chemical engineering, was introduced about 1962 to the field of environmental engineering. An understanding of unit processes is the foundation for continued learning and for designing treatment systems. The time is ripe for a new textbook that delineates the role of unit process principles in environmental engineering. Suitable for a two-semester course, *Water Treatment Unit Processes: Physical and Chemical* provides the grounding in the underlying principles of each unit process that students need in order to link theory to practice. Bridging the gap between scientific principles and engineering practice, the book covers approaches that are common to all unit processes as well as principles that characterize each unit process. Integrating theory into algorithms for practice, Professor Hendricks emphasizes the fundamentals, using simple explanations and avoiding models that are too complex mathematically, allowing students to assimilate principles without getting sidelined by excess calculations. Applications of unit processes principles are illustrated by example problems in each chapter. Student problems are provided at the end of each chapter; the solutions manual can be downloaded from the CRC Press Web site. Excel spreadsheets are integrated into the text as tables designated by a CD prefix. Certain spreadsheets illustrate the idea of scenarios that emphasize the idea that design solutions depend upon assumptions and the interactions between design variables. The spreadsheets can be downloaded from the CRC web site. The book has been designed so that each unit process topic is self-contained, with sidebars and examples throughout the text. Each chapter has subheadings, so that students can scan the pages and identify important topics with little effort. Problems, references, and a glossary are found at the end of each chapter. Most chapters contain downloadable Excel spreadsheets integrated into the text and appendices with additional information. Appendices at the end of the book provide useful reference material on various topics that support the text. This design allows students at different levels to easily navigate through the book and professors to assign pertinent sections in the order they prefer. The book gives your students an understanding of the broader aspects of one of the core areas of the environmental engineering curriculum and knowledge important for the design of treatment systems.

remnant 2 media questions: Textbook of Otitis Media Marcos V. Goycoolea, Sady Selaimen da Costa, Chris de Souza, Michael M. Paparella, 2023-12-29 This textbook presents a broad

approach to otitis media ranging from the basic to the advanced, and comprehensively reviews the diagnosis, treatment, management, and complications of patients with infections of the middle ear (OM). It has been proven that children whose hearing has been affected by otitis media suffer academically. Since their hearing is impaired, their scholastic performance deteriorates, leading to multiple health and social problems. This in turn has a cascading effect on the child's ability to perform and cope. Quite often these problems are silent and go unrecognized and misdiagnosed. The socioeconomic impact of otitis media is profound and can deeply and adversely impact a child's growth and development if not diagnosed correctly and in a timely manner. The textbook starts by covering the basics, including chapters on classification and terminology, anatomy and embryological development of the inner ear, the immune system and the inner ear, inflammation and infection, genetic predisposition, current treatment strategies including surgical and non-surgical approaches, and hearing devices. Following chapters review the current and future state of the art in OM, including chapters on tympanoplasty, temporal bone cholesteatomas, advanced hearing and balance evaluations, advanced imaging evaluations, and mastoidectomy. Textbook of Otitis Media will be a go-to resource for otorhinolaryngology residents and fellows, pediatricians, ENT surgeons, consultants, nurses, and audiologists.

remnant 2 media questions: *Gross Anatomy* William J.L. Felts, 2012-12-06 This manual is not intended as a textbook. Instead, it contains what one experienced teacher has judged to be the material most needed to prepare you to cope with a wide range of questions dealing directly or indirectly with Gross Anatomy. The emphasis is placed on material that has appeared on recent National Boards, Part I, examinations. Consequently, many points emphasized in your medical school course may not be stressed here. Therefore, before you begin your review, please examine the entire manual to appraise its organization and content. Throughout this review, text is kept to a minimum. The illustrations--essentially adaptations of blackboard drawings--support the text. You may wish to consult your favorite atlas of anatomy as well. A general table of contents follows this preface, and detailed ones precede each chapter to facilitate searches and cross references. The sequence of chapters takes you from the most straightforward regions (the extremities) to the most complex (head and neck), but you may, of course, follow any sequence suitable to your needs.

remnant 2 media questions: *Historical Foundations of Cognitive Science* J.C. Smith, 2012-12-06 My interest in gathering together a collection of this sort was generated by a fortuitous combination of historical studies under Professor Keith Lehrer and studies in cognitive science under Professor R. Michael Harnish at the University of Arizona. Work on the volume began there while I was an instructor in the Department of Linguistics and was greatly encouraged by participants in the Faculty Seminar on Cognitive Science chaired by Professor Lance J. Rips. I wish to express my appreciation to all of these and to many other individuals with whom I discussed the possibility of contribution to this work. I am especially grateful to the authors of the essays included here, as they showed more patience than I could have hoped for in seeing me through a number of uncertain stages in development of the project. My thanks are also due to my colleague Charles Reid for assistance in reviewing submissions, to Tim McFadden for computer resources, and again, to Keith Lehrer for continuing advice in arrangements for publication. Financial support for manuscript preparation was provided in part under University Research Grant No. 617 from the University Research Council, Youngstown State University.

remnant 2 media questions: Glucagon I, 2012-12-06 The Editorial Board of the Handbook of Experimental Pharmacology apparently did not hurry in suggesting production of a volume on glucagon since the present opus is number sixty-six in the series. This fact is even more striking if we consider that 34 volumes published over about eight years will separate the books on glucagon from those on insulin on library shelves, whereas only a few microns separate the cells manufacturing these two polypeptides within the islets of Langerhans in the pancreas! Numerous factors have probably caused this discrimination; four of them are: First, insulin deficiency or resistance is the cause of one of the most serious and distressing diseases, diabetes mellitus, which affects millions of people, whereas glucagon deficiency is apparently an extremely rare disorder, for which detailed reports are published of individual cases whenever they occur. Second, since its discovery in 1921 by BANTING and BEST, insulin has been irreplaceable for the treatment of the most severe forms of diabetes, whereas, in contrast, glucagon was until recently considered a relatively minor therapeutic agent. Third, whereas insulin is a compound which has been well characterized since the pioneering work of SANGER and its biosynthesis clearly identified by STEINER and his co-workers, glucagon, also well characterized chemically, has suffered from its parenthood with the so-called glucagon-like immunoreactive substances, an incompletely defined series of immunologically related polypeptides present in the gut, the pancreas and some other parts of the body.

remnant 2 media questions: Locality Domains in the Spanish Determiner Phrase M. Emma Ticio, 2009-12-03 Examining its subject from a generative perspective, this highly detailed text deals with the syntax of nominal expressions. It focuses on empirical data taken from the Spanish language, though the author goes further to draw conclusions of wider theoretical interest from material culled from other languages too. The book considers crucial phenomena in the nominal domain, such as extraction out of nominal phrases and ellipsis in these phrases, as well as their modification. In doing so it provides the reader with a unified explanation of a number of phenomena that have not previously been analyzed under a single basic account. In particular, Ticio explores how economy notions interact with a number of functional categories, with the length and type of movements allowed, and with the existence of three internal domains within nominal expressions. She uses these observations to inform her analysis of the structure of arguments and adjuncts in nominal expressions, and of the potential these elements have for extraction. To test the empirical adequacy of her analysis, she employs phenomena such as the properties of attributive adjectives, partial cliticization and nominal elision in Spanish nominal phrases.

remnant 2 media questions: Lattice Gauge Theory B. Bunk, K.H. Mutter, K. Schilling, 2012-12-06 This volume presents the contributions to the international workshop entitled Lattice Gauge Theory - a Challenge in Large Scale Computing that was held in Wuppertal from November 4 to 7, 1985. This meeting was the third in a series of European workshops in this rapidly developing field. The meeting intended to bring together both active university research ers in this field and scientists from industry and research centers who pursue large scale computing projects on problems within lattice gauge theory. These problems are extremely demanding from the point of view of both machine hardware and algorithms, for the verification of the continuum fields theories like Quantum Chromodynamics in four-dimensional Euclidean space-time is quite cumbersome due to the tremendously large number of degrees of freedom. Yet the motivation of theoretical physicists to exploit computers as tools for the simulation of complex systems such as gauge field theories has grown considerably during the past years. In fact, quite a few prominent colleagues of

ours have even gone into machine building, both in industry and research institutions: more parallelism, and more dedicated computer architecture are their design goals to help them boost the Megaflop rate in their simulation processes. The workshop contained several interesting seminars with status reports on such supercomputer projects like the Italian APE (by E. Marinari), the IBM project GF-11 (by D. Weingarten), and the Danish projects MOSES and PALLAS (by H. Bohr).

remnant 2 media questions: Traction Gabriel Weinberg, Justin Mares, 2015-10-06 Most startups don't fail because they can't build a product. Most startups fail because they can't get traction. Startup advice tends to be a lot of platitudes repackaged with new buzzwords, but Traction is something else entirely. As Gabriel Weinberg and Justin Mares learned from their own experiences, building a successful company is hard. For every startup that grows to the point where it can go public or be profitably acquired, hundreds of others sputter and die. Smart entrepreneurs know that the key to success isn't the originality of your offering, the brilliance of your team, or how much money you raise. It's how consistently you can grow and acquire new customers (or, for a free service, users). That's called traction, and it makes everything else easier—fund-raising, hiring, press, partnerships, acquisitions. Talk is cheap, but traction is hard evidence that you're on the right path. Traction will teach you the nineteen channels you can use to build a customer base, and how to pick the right ones for your business. It draws on interviews with more than forty successful founders, including Jimmy Wales (Wikipedia), Alexis Ohanian (reddit), Paul English (Kayak), and Dharmesh Shah (HubSpot). You'll learn, for example, how to:

- Find and use offline ads and other channels your competitors probably aren't using
- Get targeted media coverage that will help you reach more customers
- Boost the effectiveness of your email marketing campaigns by automating staggered sets of prompts and updates
- Improve your search engine rankings and advertising through online tools and research

Weinberg and Mares know that there's no one-size-fits-all solution; every startup faces unique challenges and will benefit from a blend of these nineteen traction channels. They offer a three-step framework (called Bullseye) to figure out which ones will work best for your business. But no matter how you apply them, the lessons and examples in Traction will help you create and sustain the growth your business desperately needs.

remnant 2 media questions: The Curve of Time M. Wylie Blanchet, 2024-10-05 A beloved and bestselling Pacific Northwest classic, now available in paperback from Harbour Publishing! Widowed at the age of thirty-five, Muriel Wylie Blanchet packed up her five children in the summers that followed and set sail aboard the twenty-five-foot Caprice. For fifteen summers, in the 1920s and 1930s, the family explored the coves and islands of the BC coast, encountering settlers and hermits, hungry bears and dangerous tides, and falling under the spell of the region's natural beauty. Driven by curiosity, the family followed the quiet coastline, and Blanchet—known as Capi, after her boat—recorded their wonder as they threaded their way between the snowfields, slept under the bright stars and wandered through Indigenous winter villages left empty in the summer months. The Curve of Time weaves the story of these years into a memoir that has inspired generations to seek out their own adventures on the wild west coast. First published in 1961, less than a year before the

author died, Blanchet's captivating work has become a classic of travel writing, and one of the bestselling BC books of all time.

remnant 2 media questions: Origin and Evolution of Interplanetary Dust A.C.

Levasseur-Regourd, H. Hasegawa, 2012-12-06 THE THE KYOTO KYOTO COLLOQUIUM

COLLOQUIUM It has almost become a tradition to periodically review the progress of our knowledge of interplanetary dust at an interdisciplinary level. After the Honolulu (1967), Heidelberg (1975), Ottawa (1979) and Marseilles (1984) meetings, it was decided to hold a meeting specially devoted to the Origin and Evolution of Interplanetary Dust in Kyoto, Japan on 27-30 August 1990. This colloquium was certainly appropriate in location, timing and objective. The choice of the location was most appropriate, not only because of the charm of the beautiful city of Kyoto, but also because of the important involvement of our Japanese colleagues, both in observations of interplanetary, cometary, meteoritic, circumplanetary or circumstellar dust, and in physico-chemical analysis or theoretical developments.

remnant 2 media questions: *Neuroscience and Media* Michael Grabowski, 2014-12-05 This volume explores how advances in the fields of evolutionary neuroscience and cognitive psychology are informing media studies with a better understanding of how humans perceive, think and experience emotion within mediated environments. The book highlights interdisciplinary and transdisciplinary approaches to the production and reception of cinema, television, the Internet and other forms of mediated communication that take into account new understandings of how the embodied brain senses and interacts with its symbolic environment. Moreover, as popular media shape perceptions of the promises and limits of brain science, contributors also examine the representation of neuroscience and cognitive psychology within mediated culture.

remnant 2 media questions: Astrophysics Update 2 John Mason, 2006-08-29 Astrophysics Updates is intended to serve the information needs of professional astronomers and postgraduate students about areas of astronomy, astrophysics and cosmology that are rich and active research spheres. Observational methods and the latest results of astronomical research are presented as

well as their theoretical foundations and interrelations. The contributed commissioned articles are written by leading exponents in a format that will appeal to professional astronomers and astrophysicists who are interested in topics outside their own specific areas of research. This collection of timely reviews may also attract the interest of advanced amateur astronomers seeking scientifically rigorous coverage.

remnant 2 media questions: *Systems Approaches to Developmental Neurobiology* Pamela A. Raymond, Stephen S. Easter Jr., Giorgio M. Innocenti, 2012-12-06 It is appropriate at the outset of this book to pose a question that was often asked --of the organizers before the meeting took place and later among those who participated in the meeting -- What is meant by 'Systems Approaches' in the study of developmental neurobiology? The answer, as we originally conceived it, can be succinctly summarized by the word interactions. That brief epithet was expanded during the general discussion portion of the meeting, where the following definition was offered: Systems approaches in developmental neurobiology are unified by attention to the emergent properties of the developing system under investigation and by a focus on the aspects of development of the nervous system that depend on interactions among its various elements, be they molecular, intracellular or multicellular. As opposed to ignoring complexity or trying to wish it away, those of us who utilize a systems approach embrace the principle that complexity is what makes the nervous system special. We have come to recognize that wherever we look, we find interactions which are to be probed and eventually, understood. Even the so-called simple systems, a term that has been used to describe many invertebrate preparations, are embraced under the above definition, since with further study it is becoming increasingly clear that such systems are not as simple as once thought. We also include molecular genetics under the systems rubric. After all, genes regulate other genes which regulate others, and so it goes.

remnant 2 media questions: **Corotating Interaction Regions** A. Balogh, J.T. Gosling, J.R. Jokipii, R. Kallenbach, H. Kunow, 2013-06-29 A Corotating Interaction Region (CIR) is the result of the interaction of fast solar wind with slower solar wind ahead. CIRs have a very large three-dimensional extent and are the dominant large-scale structure in the heliosphere on the declining and minimum phase of the solar activity cycle. Until recently, however, CIRs could only be observed close to the ecliptic plane, and their three-dimensional structure was therefore not obvious to observers and theoreticians alike. Ulysses was the first spacecraft allowing direct exploration of the third dimension of the heliosphere. Since 1992, when it has entered a polar orbit that takes it 0 up to 80 latitude, the spacecraft's performance has been flawless and the mission has provided excellent data from a superbly matched set of instruments. Perhaps the most exciting observation during Ulysses' first passage towards the south pole of the Sun was a strong and long lasting CIR whose energetic particle effects were observed up to unexpectedly high latitudes. These observations, documented in a number of publications, stimulated considerable new theoretical work.

remnant 2 media questions: **Incomplete Category Fronting** Gereon Müller, 2013-03-14 Incomplete Category Fronting is a detailed investigation of the syntax of incomplete category fronting in German, carried out from a cross-linguistic perspective. The study presents a wealth of empirical evidence involving unbound traces created by remnant topicalization, wh-movement, scrambling, left dislocation, and extraposition. Four characteristic properties of remnant movement are identified that pose severe problems for a representational movement theory. It is argued that these properties can be fruitfully addressed on the basis of Chomsky's minimalist program, and that

they follow from a derivational movement theory that incorporates the Barriers Condition, the Strict Cycle Condition, Fewest Steps, Last Resort, and the Minimal Link Condition but completely dispenses with surface filters. Incomplete Category Fronting provides an empirical underpinning for the minimalist program and presents a powerful argument for a derivational theory of grammar. Audience: Incomplete Category Fronting will interest all linguists working on theoretical syntax, Germanic syntax or the syntax-semantics interface.

remnant 2 media questions: *High Energy Astrophysics* Gerhard Börner, 2012-12-06 The second workshop on High Energy Astrophysics of the Max-Planck-Society and the Academia Sinica was held at Ringberg Castle near Tegernsee during the week July 12-July 17, 1987. It is the purpose of these workshops to encourage the exchange of ideas between German and Chinese astrophysicists (scientists from other countries are also welcome, of course), and the pleasant atmosphere and surroundings of Ringberg Castle certainly helped the development of relaxed and stimulating discussions. In addition, we seemed to have picked out the one week of perfect weather during a rainy summer. Thanks are due to Mr. Hormann and his staff for creating a perfect infrastructure. The proceedings have required a considerable amount of editing, and I hope that all the papers are comprehensible. Thanks are due to Miss Petra Berkemeyer and Miss Hannelore Muller, who patiently retyped several manuscripts and helped with other editing jobs. I did not feel that a sharp refereeing procedure should be done, although I do not agree with all the papers in this volume. The interested reader will find that this book gives a fair account of the present status of Chinese activities in the field of high energy astrophysics, i.e. in supernova physics, accretion onto compact objects, active galaxies, and cosmology.

remnant 2 media questions: *Renal Eicosanoids* Michael Dunn, 2013-11-22

remnant 2 media questions: *Active Close Binaries* Cafer Ibanogamalu, 2012-12-06 Since the 1970s symposia or colloquia devoted to recent research on close binaries have been held around the world almost annually. At meetings of the General Assembly of the International Astronomical Union this topic has also been discussed in detail at presentations in various commission meetings and also as invited talks by leading astronomers in the field. In recent years, fundamental changes have taken place in the study of close binaries due to the improvements in observational techniques, extension of observations from X-ray to radio regions of the electromagnetic spectrum, and advances in theoretical studies. For more than a decade, a group of astronomers at Ege University Observatory has been concentrating on active close binaries with particular emphasis on the behaviour of the light curves of chromospherically active systems. Thus, we decided to organize an international meeting in Western Anatolia, where this part of Turkey had been the cradle for great developments in science during antiquity. Kuljadasi, located only minutes away from Ephesus, one of the seven wonders of the world, was selected to be the meeting site. Close binary systems constitute a very rich source of information about the physical properties of the component stars. Some systems are eclipsing variables, where periodic recurrences of eclipses are observed as comparatively brief decreases in the total brightness of the binary system. Precise methods of photometric observations make it possible to obtain the light variations of these systems because of eclipses and other phenomena.

remnant 2 media questions: *The Origin of Consciousness in the Breakdown of the Bicameral Mind* Julian Jaynes, 2000-08-15 National Book Award Finalist: "This man's ideas may be the most influential, not to say controversial, of the second half of the twentieth century."—Columbus Dispatch At the heart of this classic, seminal book is Julian Jaynes's still-controversial thesis that human consciousness did not begin far back in animal evolution but instead is a learned process that came about only three thousand years ago and is still developing. The implications of this revolutionary scientific paradigm extend into virtually every aspect of our psychology, our history and culture, our religion—and indeed our future. "Don't be put off by the academic title of Julian Jaynes's *The Origin of Consciousness in the Breakdown of the Bicameral Mind*. Its prose is always lucid and often lyrical...he unfolds his case with the utmost intellectual rigor."—The New York Times "When Julian Jaynes . . . speculates that until late in the twentieth millennium BC men had no

consciousness but were automatically obeying the voices of the gods, we are astounded but compelled to follow this remarkable thesis.”—John Updike, *The New Yorker* “He is as startling as Freud was in *The Interpretation of Dreams*, and Jaynes is equally as adept at forcing a new view of known human behavior.”—*American Journal of Psychiatry*

remnant 2 media questions: *The Unhoneymooners* Christina Lauren, 2019-05-14 THE INSTANT NEW YORK TIMES BESTSELLER! Starred reviews from Kirkus Reviews * Publishers Weekly * Library Journal Named a “Must-Read” by TODAY, Us Weekly, Bustle, BuzzFeed, Goodreads, Entertainment Weekly, Publishers Weekly, Southern Living, Book Riot, Woman’s Day, The Toronto Star, and more! For two sworn enemies, anything can happen during the Hawaiian trip of a lifetime—maybe even love—in this romantic comedy from the New York Times bestselling authors of *Roomies*. Olive Torres is used to being the unlucky twin: from inexplicable mishaps to a recent layoff, her life seems to be almost comically jinxed. By contrast, her sister Ami is an eternal champion...she even managed to finance her entire wedding by winning a slew of contests. Unfortunately for Olive, the only thing worse than constant bad luck is having to spend the wedding day with the best man (and her nemesis), Ethan Thomas. Olive braces herself for wedding hell, determined to put on a brave face, but when the entire wedding party gets food poisoning, the only people who aren’t affected are Olive and Ethan. Suddenly there’s a free honeymoon up for grabs, and Olive will be damned if Ethan gets to enjoy paradise solo. Agreeing to a temporary truce, the pair head for Maui. After all, ten days of bliss is worth having to assume the role of loving newlyweds, right? But the weird thing is...Olive doesn’t mind playing pretend. In fact, the more she pretends to be the luckiest woman alive, the more it feels like she might be. With Christina Lauren’s “uniquely hilarious and touching voice” (*Entertainment Weekly*), *The Unhoneymooners* is a romance for anyone who has ever felt unlucky in love.

remnant 2 media questions: *The Grammar of French Quantification* Lena Baunaz, 2011-03-02 This book is the first extensive study on French Quantification in the field of Syntax. It provides a typology of four main quantified noun phrases in French (existential, universal, negative and wh-), detailing their syntactic, semantic and prosodic behaviors and showing that they can be reduced to two classes—Split-DP structures or Floating quantification. Relying on syntax and semantics, the book establishes a three-way structural typology of wh in-situ phrases and extends it to existentials. It pays special attention to the prosodic properties associated with their different readings and proposes an analysis of the distribution of subextraction and pied-piping. Similarly based on semantic and syntactic tests, the book reveals N(egative) words to be universal Quantifiers. It proposes a new structure of N-words in terms of constituent negation and includes a detailed analysis of the difference between not an N and not all the N in French.
