**shanghai technology museum:** *Museums in China* Marzia Varutti, 2014 An examination of museums in China, surveying their development from the nineteenth century, and looking in particular at their incredible recent proliferation. Museums in China have undergone tremendous transformations since they first appeared in the country in the late nineteenth century. Futuristic, state-of-the-art museums have today become symbols of China's global cultural, economic and technological prominence, and over the last two decades, the number of Chinese museums has increased at an unprecedented rate, with China set to become the country with the highest number of museums in the world. But why have museums become so important? This book, based on extensive research in a number of the museums themselves, examines recent changes in their display methods, narratives, actors and architectural style. It also considers their representations of Chinese national identity, millenarian history and extraordinary cultural diversity. Through an analysis of the changes affecting not only what we observe through museums, but also the very medium of observation (i.e. museums themselves), this book provides a unique, original and timely exploration of the ongoing changes affecting Chinese society, and an evaluation of their consequences. Dr Marzia Varutti is apost-doctoral fellow at the Centre for Museum Studies, Department of Culture Studies and Oriental Languages, University of Oslo.

**shanghai technology museum:** *Museum Development in China* Gail Dexter Lord, Guan Qiang, An Laishun, Javier Jimenez, 2019-06-15 The growth of the number and scale of Chinese museums in the 21st century, from about 1,400 at the turn of the century to over 5,000 to date, reflects the government's Museum Development Plan for 2011-2020 to open one museum per 250,000 inhabitants, with the goal of attracting one billion visitors at the end of the decade. It is not just the numbers but the speed of development of Chinese museums that takes our breath away—with nearly one new museum per day being opened or expanded in this huge country. What are the motivations for the rapid development of museums in China? How is the public responding? Who pays for these museums and how? What has been the impact of china's urbanization? How do Chinese museums balance education, scientific research, social cohesion, cultural diplomacy and tourism both internal and external? These are issues that continue to be discussed and debated among western museum professionals in the context of our 200-year history of modern museology. How are these debates evolving in China, which has its own history of museology over that same period from colonialism to communism and from isolation to opening up to the world? This book explores these issues while introducing English-language readers to a sample of the new Chinese museums in case studies and photographs. To accomplish this goal, Lord Cultural Associates partnered with the Chinese Museums Association who engaged leading Chinese museologists, museum directors, academics and architects to provide chapters and case studies on the history of museums in China, on evolving national museum policies, museum exhibitions and cultural diplomacy, the role of private museums, and the impact of museums on society. The four sections of this book build our knowledge of the roles of China's museums through social and political changes, the systems of governance, the

complex relationships between private and public sectors and many levels of government. Section One places the current building boom in context. Section Two addresses how China's rapid urbanization has fueled the museum building boom, framed it, formed it and in some cases financed it. Section Three analyzes how Chinese exhibitions are tools for cultural diplomacy and key elements of soft power. The six case studies in Section Four provide perspectives on the diversity of innovative approaches in the sector. *Museum Development in China* --- a beautiful, full-color book --- is the product of an international collaboration to discover how much East and West can learn from each other about museum roles, our publics, how we preserve, what we conserve, and our future sustainability—even as we marvel at the accomplishments of China's museum building boom.

**shanghai technology museum: Culture in the Contemporary PRC** Michel Hockx, Julia Strauss, 2005-12-26 The culture of the People's Republic of China offers a unique blend of the popular, the political and the avant-garde. In no other country in the world are cultural products subjected to such strict censorship and at the same time consumed by such large numbers of people. This volume presents essays by scholars at the cutting edge of Chinese cultural studies, dealing with subjects ranging from advertising to poetry, from rock music to revolutionary museums, providing an authoritative and multi-faceted analysis of some of the world's most complex cultural phenomena.

**shanghai technology museum: Shanghai Future** Anna Greespan, 2014-11-15 China is in the midst of the fastest and most intense process of urbanization the world has ever known, and Shanghai -- its biggest, richest and most cosmopolitan city -- is positioned for acceleration into the twenty-first century. Yet, in its embrace of a hopeful -- even exultant -- futurism, Shanghai recalls the older and much criticized project of imagining, planning and building the modern metropolis. Today, among Westerners, at least, the very idea of the futuristic city -- with its multilayered skyways, domestic robots and flying cars -- seems doomed to the realm of nostalgia, the sadly comic promise of a future that failed to materialize. *Shanghai Future* maps the city of tomorrow as it resurfaces in a new time and place. It searches for the contours of an unknown and unfamiliar futurism in the city's street markets as well as in its skyscrapers. For though it recalls the modernity of an earlier age, Shanghai's current re-emergence is only superficially based on mimicry. Rather, in seeking to fulfill its ambitions, the giant metropolis is reinventing the very idea of the future itself. As it modernizes, Shanghai is necessarily recreating what it is to be modern.

**shanghai technology museum: Urban Biodiversity and Built Environment** Jing Gan, 2021-04-20 This book proposes the concept of urban multiple habitats and then analyzes its corresponding classification, function and potential supply capability. It provides an analysis framework for studying the relationship between urban biodiversity and built environment, and for

considering the loss of urban habitats caused by high-density development. It argues that urban biodiversity is a key indicator for assessing urban ecosystem services. On this basis, the book then presents a case study mainly focusing on wild birds in Shanghai, as urban wild birds and their species could be viewed as an essential indicator for evaluating healthy ecosystem of contemporary cities. Based on the empirical findings, the book proposes an assessment model for urban biodiversity performance and a range of principles, strategies and key indicators regarding the optimization of urban planning and design practice to enhance urban biodiversity performance.

**shanghai technology museum:** *Silencing Shanghai* Fang Xu, 2021-06-24 *Silencing Shanghai* investigates the paradoxical and counterintuitive contrast between Shanghai's emergence as a global city and the marginalization of its native population, captured through the rapid decline of the distinctive Shanghai dialect. From this unique vantage point, Fang Xu tells a story of power relations in a cosmopolitan metropolis closely monitored and shaped by an authoritarian state through policies affecting urban redevelopment, internal migration, and language. These state policies favor the rich, the resourceful, and the highly educated, while alienate the poorer and less educated Shanghainese geographically and linguistically. When the state vigorously promotes Mandarin Chinese through legal and administrative means, Shanghainese made the conscious yet reluctant choice of shifting from the dialect to the national language. At the same time, millions of migrants have little incentive to adopt the vernacular given that their relation to the state has already firmly established their legal, financial, and social standing in the city. The recent shift in the urban linguistic scene that silences the Shanghai dialect is ultimately part of the state-led global city-building process. Through the association of the use of national language with realizing the China Dream, the state further eliminates the unique vernacular characters of Shanghai.

**shanghai technology museum:** *Sensing China* Shengqing Wu, Xuele Huang, 2022-08-16 This book presents the first collection of studies of the senses and sensory experiences in China, filling a gap in sensory research while offering new approaches to Chinese Studies. Bringing together 12 chapters by literary scholars and historians, this book critically interrogates the deeply rooted meanings that the senses have coded in Chinese culture and society. Built on an exploration of the sensorium in early Chinese thought and late imperial literature, this book reveals the sensory manifestations of societal change and cultural transformation in China from the nineteenth century to the present day. It features in-depth examinations of a variety of concepts, representations, and practices, including aural and visual paradigms in ancient Chinese texts; odours in Ming-Qing literature and Republican Shanghai; the tactility of kissing and the sonic culture of community singing in the Republican era; the socialist sensorium in art, propaganda, memory, and embodied experiences; and contemporary-era multisensory cultural practices. Engaging with the exciting sensory turn, this original work makes a unique contribution to the world history of the senses, and will be a valuable resource to scholars and students of Chinese Literature, History, Cultural Studies, and Media.

**shanghai technology museum:** *Richest Cities in the World* IntroBooks, 2018-02-22 Modern times are hard and competition seems to be in the air. Even the most underdeveloped cities seem to be moving ahead rapidly to catch up with the developed ones to earn themselves a place in the prestigious top ten richest cities in the world. Technology has developed fast and is spreading like fire. Governments are spending on their nations so they can harvest the available resources and

catch up in the race of being the best. Value of currencies rise and fall, economies crumble and the ones that stand strong are the ones who take the lead. The richest cities in the world for 2017 are also the major contributors to their countries GDP.

**shanghai technology museum: Reinforcing Authoritarianism Through Democracy** Xuan Qin, 2021-01-25 This book provides empirical evidence to show how democratic experiments are harnessed to achieve control and support authoritarianism, through the lens of participatory pricing, which is one of the most important forms of deliberative democracy in China. The crucial point is an interlacement of easily perceptible improvement in empowerment (voluntary enrollment, disclosure of information and opportunities for expression during events) and hidden control (delicately designed procedures and pre-existing frameworks that influence participants in how they think, and when they talk). The mixture of these two mechanisms assures participants and educates them, producing cooperative citizens desired by the government. This is referred to as the partial empowerment strategy, which challenges the traditional assumption of the correlation between deliberation and empowerment. When authoritarian control influences deliberations in a form that obstructs the natural developmental process of empowerment, it acts as a filter that encourages only some form of empowerment, but precludes those that are too risky for the government. This exertion of dominance through a participatory form reflects the development of governance capability of China as a modern authoritarian state and explains its “surprising” resilience.

**shanghai technology museum: Reverse Entrepreneurship in Latin America** Pável Reyes-Mercado, Guillermo Jesús Larios Hernández, 2018-09-11 This book explores the concept of reverse entrepreneurship, providing real-life examples of innovative start-ups and ventures hoping to internationalize. Traditionally, entrepreneurial ideas have flowed from developed countries to emerging markets. This book, however, examines entrepreneurial ideas flowing in the opposite direction, with case studies from organizations that were initially launched in emerging markets. With a specific focus on Latin America, the cases examine the experiences of entrepreneurs and reveal much-needed strategies for entry into developed markets. This book will undoubtedly be useful to both academics and practitioners as it covers a wide range of industries, products and services and takes a closer look at market platforms and high-impact entrepreneurship. Providing a valuable contribution to a relatively unexplored area, this is a compelling collection of insights into reverse entrepreneurship which presents practical solutions for entrepreneurs looking to expand their businesses in the future.

**shanghai technology museum: Emergent Architectural Territories in East Asian Cities** Peter G. Rowe, 2012-12-12 This book presents current developments in city planning and architecture in East Asia. It describes the many neighborhoods in which the region's large cities are modernizing or expanding with innovative structures and advanced construction projects. It combines a typology of public structures with an analysis of the compositional principles of urban environments. Thus, it finally connects new developments in city planning with new developments in architecture, and considers examples such as CCTV, Lujiazui, Kansai Airport, Xinyi, Taipei 101, Chek Lap Kok, Cheonggyecheon, Roppongi Hills, Da Shanzi, Shahe, Omotesando, and Marina Bay from a new perspective. And the new perspectives presented here are not just theoretical: some forty full-page bird's eye views prepared especially for this volume show these future urban settings in highly detailed images of breathtaking beauty. The result is a rich portrait of the coming together of global and local influences in non-Western countries. With its systematic approach, this presentation by one of the leading international experts in the field is a reference work on a topic of central importance to the world of construction today.

**shanghai technology museum: The People's Peking Man** Sigrid Schmalzer, 2009-05-15 In the 1920s an international team of scientists and miners unearthed the richest evidence of human evolution the world had ever seen: Peking Man. After the communist revolution of 1949, Peking Man became a prominent figure in the movement to bring science to the people. In a new state with twin goals of crushing “superstition” and establishing a socialist society, the story of human evolution was the first lesson in Marxist philosophy offered to the masses. At the same time, even Mao's

populist commitment to mass participation in science failed to account for the power of popular culture—represented most strikingly in legends about the Bigfoot-like Wild Man—to reshape ideas about human nature. The People's Peking Man is a skilled social history of twentieth-century Chinese paleoanthropology and a compelling cultural—and at times comparative—history of assumptions and debates about what it means to be human. By focusing on issues that push against the boundaries of science and politics, The People's Peking Man offers an innovative approach to modern Chinese history and the history of science.

Doering, 2020-12-31 The Journal of Cultural Management and Cultural Policy offers international perspectives on a wide range of issues in cultural management and cultural policy research and practice. In light of the global pandemic, environmental degradation, and racial justice crises, the contributions in this issue offer timely responses and thorough research on museum management, collection and archiving practices, curatorial approaches, and cultural policy instruments used to transform existing museum infrastructures. What is a decolonized collection? How does it affect exhibition development and public programming? How can museums serve a diverse collective memory in the future and what implications does this have for museum users? What role does the digital museum play in this context? And how does cultural policy need to respond to such novel approaches? Including perspectives from many parts of the world, this issue discusses ideas of what 21st-century museums could be.

**shanghai technology museum:** **Cultures and Globalization** Helmut K Anheier, Yudhishtir Raj Isar, 2012-03-31 Today is a new metropolitan age and for the first time ever more people live in cities than they do anywhere else. As cities strengthen their international and cultural influence, the global world is acted out most articulately in the world's urban hubs - through its diverse cultures, broad networks and innovative styles of governance. Looking at the city through its internal dynamics, the book examines how governance and cultural policy play out in a national and international framework. Making a truly global contribution to the literature, the editors bring together a truly international and highly-respected bevy of scholars. In doing so, they skilfully steer debates beyond the city as an economic powerhouse, to cover issues that fully comprehend a city's cultural dynamics and its impact on policy including alternative economies, creativity, migration, diversity, sustainability, education and urban planning. Innovative in its approach and content, this book is ideal for students, scholars and researchers interested in sociology, urban studies, cultural studies, and public policy.

**shanghai technology museum: Intangible Natural Heritage** Eric Dorfman, 2011-08-25 The topic of intangible natural heritage is new, recently emerging as an important subject of inquiry. It describes the untouchable elements of the environment that combine to create natural objects, and help define our relationship to them. These elements can be sensory, like auditory landscapes, or processes like natural selection. As a concept, intangible natural heritage is growing in prominence, as museums are increasingly charged safeguarding and interpreting the milieux from which their objects originate. This book is a significant advance on the subject of intangible natural heritage; no book on the topic has yet been written and current scholarship is confined to a few isolated papers. As such, there exists a wide variety of perspectives on the topic. Intangible Natural Heritage presents a spectrum of opinion, making the first attempt at a unifying concept on which future work can be based. Authors from Europe, Asia, Australasia, Britain, and North America, address topics on scales from minute insects to sweeping landscapes. The common thread in these explorations is the importance of human relationships with nature that is passed down from generation to generation. In a world that is becoming increasingly fragile, recognizing and fostering these relationships has never been more vital.

**shanghai technology museum: Exhibiting the Past** Kirk A. Denton, 2013-12-31 During the Mao era, China's museums served an explicit and uniform propaganda function, underlining official Party history, eulogizing revolutionary heroes, and contributing to nation building and socialist construction. With the implementation of the post-Mao modernization program in the late 1970s and 1980s and the advent of globalization and market reforms in the 1990s, China underwent a radical social and economic transformation that has led to a vastly more heterogeneous culture and polity. Yet China is dominated by a single Leninist party that continues to rely heavily on its revolutionary heritage to generate political legitimacy. With its messages of collectivism, self-sacrifice, and class struggle, that heritage is increasingly at odds with Chinese society and with the state's own neoliberal ideology of rapid-paced development, glorification of the market, and entrepreneurship. In this ambiguous political environment, museums and their curators must negotiate between revolutionary ideology and new kinds of historical narratives that reflect and highlight a neoliberal present. In *Exhibiting the Past*, Kirk Denton analyzes types of museums and exhibitionary spaces, from revolutionary history museums, military museums, and memorials to martyrs to museums dedicated to literature, ethnic minorities, and local history. He discusses red tourism—a state sponsored program developed in 2003 as a new form of patriotic education designed to make revolutionary history come alive—and urban planning exhibition halls, which project utopian visions of China's future that are rooted in new conceptions of the past. Denton's method is narratological in the sense that he analyzes the stories museums tell about the past and the political and ideological implications of those stories. Focusing on "official" exhibitionary culture rather than alternative or counter memory, Denton reinserts the state back into the discussion of postsocialist culture because of its centrality to that culture and to show that state discourse in China is neither monolithic nor unchanging. The book considers the variety of ways state museums are responding to the dramatic social, technological, and cultural changes China has experienced over the past three decades.

**shanghai technology museum: Ambient Screens and Transnational Public Spaces** Nikos

Papastergiadis, 2016-07-01 Large public screens have now become a ubiquitous part of the contemporary cityscape. Far from being simply oversized televisions, the media experts contributing to *Ambient Screens and Transnational Public Spaces* put forward a strong case that such screens could serve as important sites for cultural exchange. Advances in digital technology spell the possibilities of conducting mobile modes of interaction across national boundaries, and in the process expose the participants to novel sensory experiences, giving rise to a new form of public culture. Understanding this phenomenon calls for a reconceptualization of “public space” and “ambience,” as well as connecting the two concepts with each other. This pioneering study of the impact of media platforms on urban cultural life presents a theoretical analysis and a history of screens, followed by discussions of site-specific urban screen practices on five continents. There is also a substantial examination of the world’s first real-time cross-cultural exchange via the networking of large public screens located in Melbourne and Seoul. “*Ambient Screens and Transnational Public Spaces* is a provocative interdisciplinary collection that studies public screens in diverse urban contexts ranging from Shanghai to Montreal. Taken together, these essays redefine commonly held notions about cultural policy, information, citizenship, and the quotidian experiences of the Media City. A must read for anyone interested in urban media studies and cultural planning.” —Janine Marchessault, Professor of Cinema and Media Studies, York University “Large screens in public spaces are almost taken for granted in some cities, while in others, they are barely present. This fascinating book provokes new thinking about mediatization as a transformative dimension of urban life. The editor and authors deserve to be congratulated for a welcome and timely volume, demonstrating how large screens in cities transform public spaces and become a platform for new modes of cultural exchange.” —Lily Kong, Lee Kong Chian Chair Professor of Social Sciences, Singapore Management University

**shanghai technology museum: ASIA'S MEGACITIES** Andrea Pistolesi, Massimo Morello, 2014-11-17 According to many observers, the 21st century will see the centre of global power shift from West to East. The Asian megacities presented in this book form the heart of this new centre, where economic indicators often hit “double-digit figures”. The book is not a guide to these cities. It is a nonfiction, journalistic account that aims to provide a very personal (in the eyes of the writer and photographer) outlook on this new world through its most powerful symbols. It may be a useful tool for those wanting to do business, start a new career or even a new life. For those wanting to distance themselves from a Euro-centric vision and understand how the world could be changing. For better or worse...
