sf planetarium: Theaters of Time and Space Jordan Marche, 2005-06-08 Every year, millions of Americans visit planetariums and are captivated by their strikingly realistic portrayal of the night sky. Today, it is indeed difficult to imagine astronomy education without these magnificent celestial theaters. But projection planetariums, first developed in Germany, have been a part of American museum pedagogy only since the early twentieth century and were not widespread until the 1960s. In this unique social history, former planetarium director and historian of science Jordan D. Marché II offers the first complete account of the community of individuals and institutions that, during the period between 1930 and 1970, made planetariums the popular teaching aids they are today. Marché addresses issues such as the role of gender and social developments within the planetarium community, institutional patronage, and the popularization of science. He reveals how, at different times, various groups, including financial donors, amateur scientists, and government officials, viewed the planetarium as an instrument through which they could shape public understanding and perceptions of astronomy and space science. Offering an insightful, wide-ranging look into the origins of an institution that has fascinated millions, Theaters of Time and Space brings new perspectives to how one educational community changed the cultural complexion of science, helped shape public attitudes toward the U.S. space program, and even contributed to policy decisions regarding allocations for future space research.

sf planetarium: The Sound of Things to Come Trace Reddell, 2018-10-16 A groundbreaking approach to sound in sci-fi films offers new ways of construing both sonic innovation and science fiction cinema Including original readings of classics like The Day the Earth Stood Still, 2001: A Space Odyssey, Star Wars, and Blade Runner, The Sound of Things to Come delivers a comprehensive history of sound in science fiction cinema. Approaching movies as sound objects that combine cinematic apparatus and consciousness, Trace Reddell presents a new theory of sonic

innovation in the science fiction film. Reddell assembles a staggering array of movies from sixty years of film history—including classics, blockbusters, B-movies, and documentaries from the United States, Britain, France, Germany, Japan, and the Soviet Union—all in service to his powerful conception of sound making as a speculative activity in its own right. Reddell recasts debates about noise and music, while arguing that sound in the science fiction film provides a medium for alien, unknown, and posthuman sound objects that transform what and how we hear. Avoiding genre criticism's tendency to obsess over utopias, *The Sound of Things to Come* draws on film theory, sound studies, and philosophies of technology to advance conversations about the avant-garde, while also opening up opportunities to examine cinematic sounds beyond the screen.

sf planetarium: *The Sussex Beekeeper at the Dawn of Time* Thomas Kent Miller, 2022-09-14 *The Sussex Beekeeper at the Dawn of Time* is an unconventional and breath-taking tour de force that flirts with the crossover and steampunk genres. The book knits together a transcribed oral memoir, newspaper clippings, and myriad letters and journal pages from across two millennia, much of it held together by the pithy comments (in the form of short notations on the edges of a quarter-century-old yellowed journal) of a certain elderly beekeeper residing in Sussex, England. While comparatively few, these notes are nonetheless the essential marble skeleton on which the whole denouement and structure of the book hangs. In a sense, much of the book comprises a straightforward objective record of the excavation of historical minutiae and "forgotten" manuscripts. But then those mildewed scraps of parchment, paper, and scrolls are assembled into something far greater than the sum of their parts. The objective reportage plus the finished assemblage comprises the novel.
