spectrum pinellas park: *Dreams in the New Century* Gary R. Mormino, 2022-05-17 Florida Book Awards, Gold Medal for Florida Nonfiction Florida Historical Society Charlton Tebeau Book Award A leading Florida historian explores one of the state's most consequential eras It was a time of stunning episodes of boom and bust, an era of extremes, a decade of historic changes that point to Florida's future. In this book, eminent historian Gary Mormino illuminates early twenty-first-century Florida and its connections to some of the most significant events in contemporary American history. Following Mormino's milestone work *Land of Sunshine, State of Dreams*, which details the dynamic history of Florida from 1950 to 2000, *Dreams in the New Century* explores the state's tumultuous next chapter, a period that included the Bush v. Gore election, 9/11, the housing bubble and Great Recession, and the election of Barack Obama. During these years the Elián González story engrossed the country, Tim Tebow rose to football fame, and Donald Trump became a Florida celebrity. From hurricanes to Ponzi schemes, red tides, climate change, the "Stand-Your-Ground" gun law, demographic diversity, and more, Florida offered nonstop news fodder that reflected its extraordinary internal trends and its importance in the nation. As Mormino shows, Florida is a place of deep conflicts—North and South, liberal and conservative, newcomer and local, growth and conservation—with histories that can be traced back centuries. In 2000–2010, Mormino argues, these tensions collided to produce a "Big Bang" that will continue to resonate in years to come. Mormino takes stock of this crucible of change and explains the social, cultural, and political intricacies of a state the world struggles to understand. *Dreams in the New Century* unravels Florida's complicated recent history in a gripping, informative, and fascinating narrative.

spectrum pinellas park: Resources for Teaching Middle School Science Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine, 1998-03-30 With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area—Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type—core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed—and the only guide of its kind—Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.
