txst computer science: Handbook of Research on Equity in Computer Science in P-16 Education Keengwe, Jared, Tran, Yune, 2020-11-13 The growing trend for high-quality computer science in school curricula has drawn recent attention in classrooms. With an increasingly information-based and global society, computer science education coupled with computational thinking has become an integral part of an experience for all students, given that these foundational concepts and skills intersect cross-disciplinarily with a set of mental competencies that are relevant in their daily lives and work. While many agree that these concepts should be taught in schools, there are systematic inequities that exist to prevent students from accessing related computer science skills. The Handbook of Research on Equity in Computer Science in P-16 Education is a

comprehensive reference book that highlights relevant issues, perspectives, and challenges in P-16 environments that relate to the inequities that students face in accessing computer science or computational thinking and examines methods for challenging these inequities in hopes of allowing all students equal opportunities for learning these skills. Additionally, it explores the challenges and policies that are created to limit access and thus reinforce systems of power and privilege. The chapters highlight issues, perspectives, and challenges faced in P-16 environments that include gender and racial imbalances, population of growing computer science teachers who are predominantly white and male, teacher preparation or lack of faculty expertise, professional development programs, and more. It is intended for teacher educators, K-12 teachers, high school counselors, college faculty in the computer science department, school administrators, curriculum and instructional designers, directors of teaching and learning centers, policymakers, researchers, and students.

txst computer science: Childhoods in More Just Worlds Timothy Kinard, Gaile S. Cannella, 2021-10-29 A 2023 SPE Outstanding Book Honorable Mention Those who are younger continue to be objects of injustice and inequity; those who are younger, people of color, females, and human beings living in poverty have never been included in equitable performances of justice, care, respect, and fairness. The authors in this international volume use existing social values and institutions--and the strengths of these varied perspectives--to address justice in ways that have not previously been considered. The aim is to create more just worlds for those who are young--as well as for the rest of us. The first set of chapters, Bodies, Beings, and Relations in More Just Worlds, place at the forefront the lives of those who are younger who are commonly situated in positions of invisibility, disqualification, and even erasure. In the second section, Performances of Care and Education for More Just Worlds, the authors acknowledge that needed (re)conceptualizations of those who are younger, along with appreciation for human diversity and entanglements between the so-called human and nonhuman worlds, are the foundations for more just care and education environments. From the critique of neoliberal reform discourses to reconceptualizing human relations with nonhuman animal and material worlds, care and learning environments are rethought. The set of chapters in the final section, Stir of Echoes: 20th Century Childhoods in the 21st, take-up the 20th century critical concerns with constructions of "child" that have dominated and continue to govern perspectives imposed on those who are younger. Suggestions for becoming-with those who are younger through resources like reconceptualist scholarship, Black and Indigenous Studies, and various posthuman perspectives are provided throughout. Whatever the emphasis or focus of a section or chapter, throughout the volume is the recognition that dominant discourses (e.g. neoliberal capitalism, conservativism, progressivism, human exceptionalism) and the policies they create (and that facilitate them), influence possibilities for, and limitations to, more just childhood worlds. Therefore, each section includes chapters that address these complex discourses and policy issues. The reader is invited to engage with these complexities, to become-with the various texts, and to generate unthought possibilities for childhoods in more just worlds. txst computer science: What It Is Like to Go to War Karl Marlantes, 2011-08-30 "A precisely crafted and bracingly honest" memoir of war and its aftershocks from the New York Times–bestselling author of Matterhorn (The Atlantic). In 1968, at the age of twenty-three, Karl Marlantes was dropped into the highland jungle of Vietnam, an inexperienced lieutenant in command of forty Marines who would live or die by his decisions. In his thirteen-month tour he saw intense combat, killing the enemy and watching friends die. Marlantes survived, but like many of his brothers in arms, he has spent the last forty years dealing with his experiences. In What It Is Like to Go to War, Marlantes takes a candid look at these experiences and critically examines how we might better prepare young soldiers for war. In the past, warriors were prepared for battle by ritual, religion, and literature—which also helped bring them home. While contemplating ancient works from Homer to the Mahabharata, Marlantes writes of the daily contradictions modern warriors are subject to, of being haunted by the face of a young North Vietnamese soldier he killed at close quarters, and of how he finally found a way to make peace with his past. Through it all, he demonstrates just how poorly prepared our nineteen-year-old warriors are for the psychological and spiritual aspects of the journey. In this memoir, the New York Times–bestselling author of Matterhorn offers "a well-crafted and forcefully argued work that contains fresh and important insights into what it's like to be in a war and what it does to the human psyche" (The Washington Post).

txst computer science: Masters Theses in the Pure and Applied Sciences Wade H. Shafer, 2012-12-06 Masters Theses in the Pure and Applied Sciences was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS)* at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and dis semination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the though that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemi nation. Hence, starting with Volume 18, Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 37 (thesis year 1992) a total of 12,549 thesis titles from 25 Canadian and 153 United States universities. We are sure that this broader base for these titles reported will greatly enhance the value of this impor tant annual reference work. While Volume 37 reports theses submitted in 1992, on occasion, certain uni versities do report theses submitted in previous years but not reported at the time.

txst computer science: *E-Learning Systems, Environments and Approaches* Pedro Isaías, J. Michael Spector, Dirk Ifenthaler, Demetrios G. Sampson, 2015-03-12 The volume consists of twenty-five chapters selected from among peer-reviewed papers presented at the CELDA (Cognition and Exploratory Learning in the Digital Age) 2013 Conference held in Fort Worth, Texas, USA, in October 2013 and also from world class scholars in e-learning systems, environments and approaches. The following sub-topics are included: Exploratory Learning Technologies (Part I), e-Learning social web design (Part II), Learner communities through e-Learning implementations (Part III), Collaborative and student-centered e-Learning design (Part IV). E-Learning has been, since its initial stages, a synonym for flexibility. While this dynamic nature has mainly been associated with time and space it is safe to argue that currently it embraces other aspects such as the learners' profile, the scope of subjects that can be taught electronically and the technology it employs. New technologies also widen the range of activities and skills developed in e-Learning. Electronic learning environments have evolved past the exclusive delivery of knowledge. Technology has endowed e-Learning with the possibility of remotely fomenting problem solving skills, critical thinking and team work, by investing in information exchange, collaboration, personalisation and community building.
