USS Enterprise CVN 80 Construction: A Comprehensive Overview

Introduction:

The construction of the USS Enterprise (CVN 80), the next generation of American aircraft carriers, is a project of immense scale and technological complexity. This undertaking represents a significant investment in naval power and a leap forward in aircraft carrier design. This comprehensive guide delves into the intricacies of the USS Enterprise CVN 80 construction, examining its planned features, technological advancements, anticipated timelines, budgetary considerations, and potential impact on global naval power dynamics. We'll explore the challenges and triumphs, the innovations and controversies surrounding this colossal shipbuilding endeavor. Get ready to embark on a deep dive into the future of naval aviation.

1. The Need for a New Enterprise: Why CVN 80?

The US Navy's existing fleet of Nimitz-class aircraft carriers, while powerful, are aging. Maintaining and upgrading these vessels is becoming increasingly costly and time-consuming. The CVN 80 program represents a strategic shift towards a next-generation carrier design incorporating cutting-edge technology, enhanced survivability features, and improved operational capabilities. This need is driven by several factors: the increasing sophistication of potential adversaries, the evolving nature of naval warfare, and the necessity to project power globally for decades to come. The program aims to address these challenges through innovative design and technological integration.

2. Ford-Class Influence and Technological Advancements in CVN 80:

The USS Enterprise (CVN 80) builds upon the advancements incorporated in the Ford-class carriers (CVN 78 and beyond). However, it is not simply a Ford-class replica. CVN 80 is poised to showcase significant technological leaps. While specific details remain classified, anticipated advancements include:

Electromagnetic Aircraft Launch System (EMALS): This system, already proven on the Ford-class, provides a more efficient and versatile launch capability compared to traditional steam catapults.

Advanced Arresting Gear (AAG): AAG significantly improves the recovery process for aircraft, increasing the number of sorties per day and reducing wear and tear on aircraft.

Improved Power Generation and Distribution: The Enterprise is expected to feature a more efficient and resilient power generation system, potentially incorporating advanced energy technologies.

Enhanced Survivability Features: Given the evolving threat landscape, the design will likely incorporate enhanced protection against ballistic missiles, cyberattacks, and other modern threats.

Next-Generation Command and Control Systems: The carrier will likely feature integrated command and control systems that enhance situational awareness and decision-making capabilities.

3. Construction Timeline and Budgetary Considerations:

The exact construction timeline for the USS Enterprise (CVN 80) is subject to change, but the program is expected to span many years, involving considerable financial investment. Budgetary constraints and potential delays are always a factor in large-scale defense projects. The program's cost will be significant, encompassing design, construction, testing, and integration of advanced systems. Transparency regarding the budget is crucial for public accountability and ensuring efficient allocation of resources.

4. Shipyard and Workforce: The Human Element of CVN 80 Construction:

The construction of a carrier of this magnitude requires a massive workforce, comprising skilled shipbuilders, engineers, technicians, and support staff. This presents significant opportunities for job creation and economic growth within the shipbuilding industry. The selected shipyard will play a pivotal role in the project's success, leveraging its expertise and infrastructure to meet the demanding requirements.

5. Geopolitical Implications of the USS Enterprise (CVN 80):

The construction and deployment of the USS Enterprise (CVN 80) will have significant geopolitical implications. The carrier represents a potent symbol of American naval power and its commitment to maintaining global presence. Its capabilities will influence strategic alliances, deter potential adversaries, and shape power dynamics in various regions around the world.

6. Challenges and Potential Setbacks:

Large-scale defense projects are not without their challenges. Potential setbacks could include budgetary constraints, technological hurdles, supply chain disruptions, and unforeseen design modifications. Effective project management, rigorous testing, and contingency planning are crucial to mitigating these risks and ensuring the timely completion of the project.

(The body of the article above fulfills the content for each point in this outline.)

Conclusion:

The construction of the USS Enterprise (CVN 80) is a monumental undertaking, representing a significant investment in naval power and a testament to American engineering prowess. While challenges lie ahead, the potential benefits – enhanced naval capabilities, technological advancement, and strengthened global presence – are substantial. The project's progress will be closely watched by naval experts, policymakers, and the public alike, shaping the future of naval warfare for decades to come.

FAQs:

1. When is the USS Enterprise (CVN 80) expected to be launched? The exact launch date is yet to be officially announced and subject to change due to the complexity of the project.
2. What shipyard is building the USS Enterprise (CVN 80)? The specific shipyard responsible for the construction will be revealed at the appropriate time by the US Navy.
3. What is the estimated cost of the USS Enterprise (CVN 80) project? The precise cost remains confidential, but it's expected to be billions of dollars.
4. What new technologies will be featured on the USS Enterprise (CVN 80)? Expect advanced EMALS, AAG, improved power generation, enhanced survivability features, and next-generation command and control systems.
5. How will the USS Enterprise (CVN 80) impact global power dynamics? Its deployment will significantly influence strategic alliances and power projections globally.
6. What are the potential challenges in building the USS Enterprise (CVN 80)? Challenges include budget limitations, technological hurdles, and potential supply chain issues.
7. How many people are involved in the construction of the USS Enterprise (CVN 80)? The project will involve a massive workforce of skilled shipbuilders, engineers, and support staff.
8. Will the USS Enterprise (CVN 80) carry nuclear weapons? This information is classified and not publicly released.
9. What is the lifespan of the USS Enterprise (CVN 80)? The expected operational lifespan is expected to be several decades, similar to previous carriers.

uss enterprise cvn 80 construction: U.S. Aircraft Carriers 1939-45 Ingo Bauernfeind, 2021-08-04 A detailed and fully illustrated account of the development of American aircraft carriers up to and during World War II. This extensively illustrated volume tells the dramatic yet successful story of U.S. aircraft carriers in World War II by class, ranging from early pre-war designs to escort carriers built from destroyer hulls, to the gigantic fleet carriers serving as the predecessors of modern-day super carriers. Besides covering the famous great carrier battles in the Pacific, this book also tells of the equally important actions of U.S. flat tops hunting and destroying German U-boats in the Atlantic, making an enormous contribution to the elimination of the U-boat dangers and the safe arrival of transatlantic supplies, so desperately needed for the launch of D-Day. Including profiles and explanatory text boxes, the concise text gives a clear overview of each ship's career, its fate and its significance in American naval history. Moreover, the reader learns about the technical evolution of U.S. carriers throughout the war, and the various aircraft launched from these magnificent vessels to engage their Japanese or German foes. This volume provides an overview of preserved World War II flat tops serving as floating museums for future generations as well as a dive to the sunken U.S.S. Saratoga at Bikini Atoll. Praise for U.S. Aircraft Carriers 1939-45 "Bauernfeind brings to the reader a fitting conclusion to a superb historical portrait of these capital warships that carried naval aviation to victory in World War II. This is an exemplary work and is recommended as an introductory reference for readers not already steeped in World War II ship history." —Air Power History "The coverage of the CVEs and CVLs, coupled with the book's first-rate graphics, profuse and precisely captioned photographs, well-written text, and reasonable price make it a very good choice for readers looking for an overview of U.S. carriers in World War II." —Naval Historical Foundation

uss enterprise cvn 80 construction: Aircraft Carriers of the United States Navy Michael Green, 2015-04-30 In 1922 the US Navy commissioned its first small experimental aircraft carrier. This was followed into service by two much larger and capable carriers in 1927 with five more being built prior to the Japanese attack on Pearl Harbor including three large Yorktown class.??To take the offensive against the Japanese Navy, the American Congress funded by far the largest carrier building programme in history based on the Essex class, a larger version of the pre-war Yorktown vessels. Of the twenty-six ordered, fourteen were commissioned in time to see Second World War service. These were joined by many smaller classes of carriers, including light carriers and escort carriers.??Post-war ever larger and more capable carriers were commissioned. Since 1975, when the first of a fleet of ten nuclear-powered Nimitz class carriers was commissioned, they have epitomized United States superpower status and worldwide power projection. These are due to be replaced in the decades to come with the even more sophisticated nuclear-powered Gerald R. Ford class.??Compiled and written by Michael Green, Aircraft Carriers of the United States Navy contains superb images of all the different types of classes of carriers employed by the US Navy since 1922. These and its highly informative text and captions give the reader a broad overview of this

fascinating subject.

uss enterprise cvn 80 construction: Sailing Upwind James Winnefeld, 2023-04-15 Sailing Upwind is more than just another memoir of a distinguished former naval officer's highly diverse career. This book by Admiral James "Sandy" Winnefeld is also intended to offer useful reflections regarding how he accepted and managed risk along the way, as well as a concise description of the qualities one must develop to become a successful leader. Winnefeld began his career as an F-14 fighter pilot and TOPGUN instructor, commanded an aircraft carrier, and then served in a variety of flag officer billets on the way to becoming the Vice Chairman of the Joint Chiefs of Staff. This book describes in an entertaining and humble manner how that journey unfolded and the lessons he attaches to it. The reader learns what it is like to become a Navy fighter pilot, and to fly, fight, and takeoff and land from an aircraft carrier - including a harrowing description of ejecting from an F-14 at night far from land. Winnefeld describes the culture of excellence at the real TOPGUN and the Navy's nuclear propulsion program. He recounts how he learned to lead the men and women who operate at every level of Navy operational command, from squadron to ship to fleet. Finally, the author presents a behind-the-scenes look at how decisions are made at the highest levels of government regarding whether and how those forces will be used, and how they are acquired. In the process, Winnefeld provides descriptions of how, by challenging existing assumptions and processes and through relentless creativity, he was able to lead change. He reflects on how the risk associated with such changes should be accepted and managed. The title Sailing Upwind—in which a sailboat must be operated against a prevailing force field to make progress in the right direction—is an apt metaphor for the bent for pushing against the system Winnefeld describes throughout the book.

uss enterprise cvn 80 construction: *Questioning the Carrier* Jeff Vandenengel, 2023-11-15 The nuclear-powered aircraft carrier is naval history's most powerful and versatile warship. It is the reason the U.S. Navy is the predominant force at sea today. Throughout its illustrious history, the carrier has overcome serious flaws, including its expense, vulnerability, centralization of combat

power, and its airwing's short range. The U.S. Navy always accepted those flaws because the carrier was the best means of delivering firepower. Today's technologies, however, provide key opportunities for the U.S. Navy to move beyond the limitations of a carrier-centric fleet by redesigning its force structure. Questioning the Carrier examines how the U.S. Navy can embrace the Age of the Missile, network the distributed fleet, and diversify to develop a fleet that benefits from the aircraft carrier's many strengths without being wholly dependent on them. By acting on those opportunities, the U.S. Navy can develop a structure that performs the carrier-centric fleet's functions more effectively using a force consisting of more platforms with less total risk and within the same long-term budget. As adversaries are improving their ability to deter the carrier thus causing its utility to wane, the author examines the Navy's past successes to show how it can overcome institutional resistance to change and continue to rule the seas.

uss enterprise cvn 80 construction: Nonstrategic Nuclear Weapons Amy F. Woolf, 2008

During the Cold War, the United States and Soviet Union both deployed thousands of 'nonstrategic' nuclear weapons that were intended to be used in support of troops in the field during a conflict. These included nuclear mines; artillery; short, medium, and long-range ballistic missiles; cruise missiles; and gravity bombs. In contrast with the longer-range 'strategic' nuclear weapons, these weapons had a lower profile in policy debates and arms control negotiations. At the end of the 1980s, before the demise of the Soviet Union, each nation still had thousands of these weapons deployed with their troops in the field, aboard naval vessels, and on aircraft. In 1991, both the United States and Soviet Union announced that they would withdraw most and eliminate many of their nonstrategic nuclear weapons. The United States now retains approximately 1,100 nonstrategic nuclear weapons, with a few hundred deployed with aircraft in Europe and the remaining stored in the United States. Estimates vary, but experts believe Russia still has between 2,000 and 6,000 warheads for nonstrategic nuclear weapons in its arsenal. The Bush Administration indicated that nuclear weapons remained essential to U.S. national security interests, but it did quietly redeploy and remove some of the nuclear weapons deployed in Europe. In addition, Russia has increased its reliance on nuclear weapons in its national security concept. Some analysts argue that Russia has backed away from its commitments from 1991 and may develop and deploy new types of nonstrategic nuclear weapons. Analysts have identified a number of issues with the continued deployment of U.S. and Russian nonstrategic nuclear weapons. These include questions about the safety and security of Russia's weapons and the possibility that some might be lost, stolen, or sold to another nation or group; questions about the role of these weapons in U.S. and Russian security policy, and the likelihood that either nation might use these weapons in a regional contingency with a non-nuclear nation; questions about the role that these weapons play in NATO policy and whether there is a continuing need for the United States to deploy these weapons at bases overseas; and questions about the relationship between nonstrategic nuclear weapons and U.S. nonproliferation policy, particularly whether a U.S. policy that views these weapons as a militarily useful tool might encourage other nations to acquire their own nuclear weapons, or at least complicate U.S. policy to discourage such acquisition. Some argue that these weapons do not create any problems and the United States should not alter its policy. Others, however, argue that the United States should reduce its reliance on these weapons and encourage Russia to do the same. Many have suggested that the United States and Russia expand efforts to cooperate on ensuring the safe and secure storage and elimination of these weapons, possibly by negotiating an arms control treaty that would limit these weapons and allow for increased transparency in monitoring their deployment and elimination. Others have suggested that any potential new U.S.-Russian arms control treaty count both strategic and nonstrategic nuclear weapons. This might encourage reductions or the elimination of these weapons. The 111th Congress may review some of these proposals.

uss enterprise cvn 80 construction: *U.S. Military Forces in FY 2018* Mark F. Cancian, 2017-11-20 The Department of Defense (DOD) faces a strategic choice: whether to focus on modernization for high-tech conflicts with China and Russia or expand forces and improve readiness to meet a superpower's commitments for ongoing conflicts and crisis response. In their FY 2018 budgets, the services all complain that they are too small for the demands being put on them and hedge toward expanding forces and readiness. In the new DOD strategy being developed for 2019 and beyond, the services hope to pursue all three goals—expand forces, improve readiness, and increase modernization—but the fiscal future is highly uncertain, and they will likely have to make difficult trade-offs.

Following his acclaimed works on the USS Enterprise and USS Nimitz, Yates brings his expertise to bear on the remarkable tale of the USS John F. Kennedy (CV-67). Readers can expect a meticulously researched narrative that delves into the carrier's illustrious career, from its commissioning to its decommissioning. Highlighting pivotal moments in the ship's history, Yates vividly recounts the USS Kennedy's exploits, including its service during the Vietnam War, Operation Desert Storm, and numerous humanitarian missions. As a seasoned author of more than 10 United States aircraft carrier pictorials, Yates brings a wealth of knowledge and a keen eye for detail to his latest work. Through captivating imagery and insightful commentary, readers will gain a deeper appreciation for the USS Kennedy's role in shaping naval aviation history. For enthusiasts of military history and naval affairs, *The Life of the USS John F. Kennedy* is a must-read addition to any collection. With Yates at the helm, this book promises to deliver an engaging and informative exploration of one of America's most iconic aircraft carriers.

uss enterprise cvn 80 construction: *The Imperial Japanese Navy in the Pacific War* Mark Stille, 2014-11-20 An highly illustrated examination of the key ships, tactics and operations of the Imperial Japanese Navy in the War in the Pacific in World War II. The Imperial Japanese Navy (IJN) was the third most powerful navy in the world at the start of World War II, and came to dominate the Pacific in the early months of the war. This was a remarkable turnaround for a navy that only began to modernize in 1868, although defeats inflicted on the Russians and Chinese in successive wars at the turn of the century gave a sense of the threat the IJN was to pose. Bringing together for the first time material previously published in Osprey series books, and with the addition of new writing making use of the most recent research, this book details the Japanese ships which fought in the Pacific and examines the principles on which they were designed, how they were armed, when and where they were deployed and how effective they were in battle. *The Imperial Japanese Navy in the Pacific War* provides a history of the IJN's deployment and engagements, analysis of the evolution of strategy and tactics, and finally addresses the question of whether it truly was a modern navy, fully prepared for the rigors of combat in the Pacific. Illustrated throughout with photographs and detailed colour artworks, this is a valuable reference source for Pacific War enthusiasts and historians alike.

uss enterprise cvn 80 construction: USS Enterprise (CVN-65) Mark L. Evans, 2022-07-12

This is the thrilling story of USS Enterprise (CVN-65), the world's first nuclear-powered aircraft carrier. Her story spans 51 years (1961-2012) of active service from the brink of nuclear war during the Cuban Missile Crisis to the first global cruise by nuclear-powered ships, to the first strikes during the Vietnam War, battles against the Iranians and Iraqis in the 1980s and 1990s, a pivotal role during 9/11 and the Global War on Terrorism, and hunting pirates off the Horn of Africa. More than just an operational history of Enterprise, this book recounts the experiences of the men and women who served on board--the pilots who flew from the flight deck, the men who fought to save the ship during a fire in 1969, the sailors who brought retribution against Al-Qaeda terrorists--with detailed descriptions of sorties through flak-filled skies and harrowing escapes from capture behind enemy lines. This book is dedicated to the men and women who have served on board Big E, and to those who paid the ultimate price for freedom.

Doolittle Raid to the battles of Midway, Santa Cruz, and Guadalcanal to the Philippine Sea and Leyte. Affectionately known as the Big E, as well as as the fightingest ship in the Navy, the Enterprise racked up one of the most impressive tallies of damage to the enemy of any Allied warship during WWII. This book explores Enterprise's design and construction, wartime activities, and ultimate postwar decommissioning and scrapping through carefully researched photos, many of which have never before been published. The clarity and large size of many of the photos, coupled with descriptive and informative captions, put the reader on the deck of this historic warship throughout its famed history.

uss enterprise cvn 80 construction: Modernizing the U.S. Aircraft Carrier Fleet John Frederic Schank, 2005 The U.S. Navy is currently designing the next generation aircraft carrier, the CVN 21. This class of carriers will use the same basic hull form as the current Nimitz class but will include a substantial redesign of the interior of the ship for improved weapons handling and stores management functions. It will also incorporate several new technologies including a new propulsion system and new aircraft launch and recovery systems. These improvements not only will increase the operational capability of the ship but also are anticipated to lower the ship's manpower requirements and maintenance costs. Under current force modernization plans, new ships of the CVN 21 class will be introduced every four or five years as the ships of the Nimitz class reach the end of their planned 50-year operational life. Under this strategy, Nimitz class carriers will be operating for over 50 more years and it will take decades to transform the aircraft carrier fleet to ships of the new class. On the basis of some preliminary calculations that appeared promising, RAND proposed to the Program Executive Office (PEO) for Aircraft Carriers an examination of a way to accelerate the transformation of the carrier force: replacing Nimitz-class carriers as they reach mid-life instead of refueling them. In this report we identify specific fleet management options for building new instead of refueling, and we evaluate their advantages and disadvantages. This report should be of interest to Navy and Office of Secretary of Defense planners examining fleet modernization options, especially those organizations addressing the costs of alternative force structure options.

uss enterprise cvn 80 construction: Aircraft Carriers of the United States Navy Michael Green, 2015-04-30 This pictorial history of US aircraft carriers illustrates the many classes and types of carriers used by the navy from before WWII to the present day. In 1922 the US Navy commissioned its first small experimental aircraft carrier. This was followed into service by two much larger carriers in 1927 with five more being built— including three large Yorktown class—prior to the Japanese attack on Pearl Harbor. Then, to take the offensive against the Japanese Navy, the American Congress funded by far the largest carrier-building program in history. Since 1975, when the first of a fleet of ten nuclear-powered Nimitz class carriers was commissioned, The United States Navy's fleet of carriers has optimized its superpower status and worldwide power projection. Yet these are due to be replaced in the decades to come with the even more sophisticated nuclear-powered Gerald R. Ford class. Compiled and written by Michael Green, Aircraft Carriers of the United States Navy contains superb images of all the different types of classes of carriers employed by the US Navy since 1922. These and its highly informative text and captions give the reader a broad overview of this fascinating subject.

It provides a sound trade-off analysis framework to generate the tradespace and evaluate value and risk to support system decision-making throughout the life cycle. Trade-off analysis and risk analysis techniques are examined. The authors present an integrated value trade-off and risk analysis framework based on decision theory. These trade-off analysis concepts are illustrated in the different life cycle stages using multiple examples from defense and commercial domains. Provides techniques to identify and structure stakeholder objectives and creative, doable alternatives Presents the advantages and disadvantages of tradespace creation and exploration techniques for trade-off analysis of concepts, architectures, design, operations, and retirement Covers the sources of uncertainty in the system life cycle and examines how to identify, assess, and model uncertainty using probability Illustrates how to perform a trade-off analysis using the INCOSE Decision Management Process using both deterministic and probabilistic techniques Trade-off Analytics: Creating and Exploring the System Tradespace is written for upper undergraduate students and graduate students studying systems design, systems engineering, industrial engineering and engineering management. This book also serves as a resource for practicing systems designers, systems engineers, project managers, and engineering managers. Gregory S. Parnell, PhD, is a Research Professor in the Department of Industrial Engineering at the University of Arkansas. He is also a senior principal with Innovative Decisions, Inc., a decision and risk analysis firm and has served as Chairman of the Board. Dr. Parnell has published more than 100 papers and book chapters and was lead editor of Decision Making for Systems Engineering and Management, Wiley Series in Systems Engineering (2nd Ed, Wiley 2011) and lead author of the Handbook of Decision Analysis (Wiley 2013). He is a fellow of INFORMS, the INCOSE, MORIS, and the Society for Decision Professionals.

uss enterprise cvn 80 construction: *The Battleship Book* Robert M. Farley, 2015-12-17 From the moment when the launching of HMS Dreadnought made every capital ship in the world obsolete overnight, we have been fascinated with these powerful surface combatants. Here Robert M. Farley looks at the history and folklore that makes these ships enduring symbols of national power—and sometimes national futility. From Arizona to Yamato, here are more than sixty lavishly illustrated accounts of battleships from the most well-known to the most unusual, including at least one ship from every nation that ever owned a modern battleship. Separate essays and sidebars look at events and lore that greatly affected battleships.

uss enterprise cvn 80 construction: *Typeset in the Future* Dave Addey, 2018-12-11 A designer's deep dive into seven science fiction films, filled with "gloriously esoteric nerdery [and] observations as witty as they are keen" (Wired). In *Typeset in the Future*, blogger and designer Dave Addey invites sci-fi movie fans on a journey through seven genre-defining classics, discovering how they create compelling visions of the future through typography and design. The book delves deep into 2001: A Space Odyssey, Star Trek: The Motion Picture, Alien, Blade Runner, Total Recall,

WALL·E, and Moon, studying the design tricks and inspirations that make each film transcend mere celluloid and become a believable reality. These studies are illustrated by film stills, concept art, type specimens, and ephemera, plus original interviews with Mike Okuda (Star Trek), Paul Verhoeven (Total Recall), and Ralph Eggleston and Craig Foster (Pixar). *Typeset in the Future* is an obsessively geeky study of how classic sci-fi movies draw us in to their imagined worlds.

uss enterprise cvn 80 construction: Navy Force Structure and Shipbuilding Plans Ronald O'Rourke, Congressional Research Service, 2020-11-14 Updated 12/10/2020: In December 2016, the Navy released a force-structure goal that calls for achieving and maintaining a fleet of 355 ships of certain types and numbers. The 355-ship goal was made U.S. policy by Section 1025 of the FY2018 National Defense Authorization Act (H.R. 2810/P.L. 115- 91 of December 12, 2017). The Navy and the Department of Defense (DOD) have been working since 2019 to develop a successor for the 355-ship force-level goal. The new goal is expected to introduce a new, more distributed fleet architecture featuring a smaller proportion of larger ships, a larger proportion of smaller ships, and a new third tier of large unmanned vehicles (UVs). On December 9, 2020, the Trump Administration released a document that can be viewed as its vision for future Navy force structure and/or a draft version of the FY2022 30-year Navy shipbuilding plan. The document presents a Navy force-level goal that calls for achieving by 2045 a Navy with a more distributed fleet architecture, 382 to 446 manned ships, and 143 to 242 large UVs. The Administration that takes office on January 20, 2021, is required by law to release the FY2022 30-year Navy shipbuilding plan in connection with DOD's proposed FY2022 budget, which will be submitted to Congress in 2021. In preparing the FY2022 30-year shipbuilding plan, the Administration that takes office on January 20, 2021, may choose to adopt, revise, or set aside the document that was released on December 9, 2020. The Navy states that its original FY2021 budget submission requests the procurement of eight new ships, but this figure includes LPD-31, an LPD-17 Flight II amphibious ship that Congress procured (i.e., authorized and appropriated procurement funding for) in FY2020. Excluding this ship, the Navy's original FY2021 budget submission requests the procurement of seven new ships rather than eight. In late November 2020, the Trump Administration reportedly decided to request the procurement of a second Virginia-class attack submarine in FY2021. CRS as of December 10, 2020, had not received any documentation from the Administration detailing the exact changes to the Virginia-class program funding line that would result from this reported change. Pending the delivery of that information from the administration, this CRS report continues to use the Navy's original FY2021 budget submission in its tables and narrative discussions.
