usc psychology minor: Minor China Hentyle Yapp, 2021-03-12 In *Minor China* Hentyle Yapp analyzes contemporary Chinese art as it circulates on the global art market to outline the limitations of Western understandings of non-Western art. Yapp reconsiders the all-too-common narratives about Chinese art that celebrate the heroic artist who embodies political resistance against the authoritarian state. These narratives, as Yapp establishes, prevent Chinese art, aesthetics, and politics from being discussed in the West outside the terms of Western liberalism and notions of the “universal.” Yapp engages with art ranging from photography and performance to curation and installations to foreground what he calls the minor as method—tracking aesthetic and intellectual practices that challenge the predetermined ideas and political concerns that uphold dominant conceptions of history, the state, and the subject. By examining the minor in the work of artists such as Ai Weiwei, Zhang Huan, Cao Fei, Cai Guo-Qiang, Carol Yinghua Lu, and others, Yapp demonstrates that the minor allows for discussing non-Western art more broadly and for reconfiguring dominant political and aesthetic institutions and structures.

usc psychology minor: *The Oxford Handbook of Developmental Psychology and the Law* Allison D. Redlich, Jodi A. Quas, 2023-12-22 In the *Oxford Handbook of Developmental Psychology and the Law*, eminent scholars from varied disciplines detail how developmental science and the law shape one another across the lifespan. The chapters address fundamental questions about how human development influences laws and practices in the legal system and how the law and its practices influence development. The chapters, as well, reveal how the potential for, and consequences of, victimization and perpetration—whether they be criminal or civil acts—are impacted by and impact development. The diversity of topics, range of influences across the lifespan, and complexities of developmental and legal influences are on display throughout the volume. In Section I, which spanned Infancy and Childhood to Adolescence, authors covered such topics as prenatal and infant abuse; the development of antisocial behavior in children and adolescents; questioning of minor victims, witnesses, and suspects; treatment of youth in juvenile, criminal, and specialty courts but also in immigration, custody, and adoption hearings, and finally in schools and prisons. In Section II, which spanned Adulthood to Aging, authors addressed some of the same topics, but here from the perspective of younger and older adults. These include antisocial behavior in adults, the experiences of elder adults as victim/witnesses, and experiences in prison, especially among parents and the elderly. Other topics were covered as well, including persons with developmental disabilities involvement in the courts, reentry transitions after incarceration, and reproductive and end-of-life legal rights. Across this comprehensive volume, authors demonstrate the immense value of research for policy and practice and viewing legal involvement through the lens of lifespan development--

usc psychology minor: The Art and Adventure of Leadership Warren Bennis, Steven B. Sample, Rob Asghar, 2015-04-06 For the first time, a top leadership scholar and a top leadership practitioner explore the true duties, demands, and privileges of leadership. Intellectual sparks flew

when Warren Bennis, the “father” of modern leadership studies and Steven B. Sample, one of the most accomplished university presidents in recent history, came together for candid explorations of the forces that shape successful leaders and unsuccessful ones. *The Art and Adventure of Leadership*, their final collaboration, reveals the profound insights that the authors gained together over the 16 years in which they co-taught one of the most popular leadership courses in America. Here, each brings his own distinct vantage point as they address the mechanics and mysteries of leadership. The result is a unique examination of the journey of great leaders from momentary setbacks to ultimate success. It offers profound lessons on what determines the difference between failure and redemption for leaders. And it illuminates important and overlooked dimensions of great leaders ranging from Winston Churchill to Steve Jobs. Together, they explore why: A mature leader must grasp when it’s healthy to risk failure, and when failure can’t be tolerated at any cost. Leadership isn’t for everyone and requires a particular set of skills and competencies that are often glossed over in most management literature. To succeed in an uncertain and fast-changing world, a shrewd leader must understand which aspects of human society change—and which aspects never change. A mature, wise leader must seek a balance between high-minded ideals and the gritty realities and compromises that leaders face in their daily lives. Above all, meaningful leadership remains a matter of character. With incredible insight, this book examines why George Washington, Abraham Lincoln, and other giants were able to recover from failures, learn resilience, and prepare themselves for their moments of destiny. In so doing, it demonstrates and helps cultivate the leadership skills that you need to create your own most meaningful legacy. *The Art and Adventure of Leadership* is a unique look at leadership, and a critical resource for the leaders of tomorrow.

usc psychology minor: Psychology for Sustainability Britain A. Scott, Elise L. Amel, Susan M. Koger, Christie M. Manning, 2015-07-24 *Psychology for Sustainability*, 4th Edition -- known as *Psychology of Environmental Problems: Psychology for Sustainability* in its previous edition -- applies psychological theory and research to so-called environmental problems, which actually result from human behavior that degrades natural systems. This upbeat, user-friendly edition represents a dramatic reorganization and includes a substantial amount of new content that will be useful to students and faculty in a variety of disciplines—and to people outside of academia, as well. The literature reviewed throughout the text is up-to-date, and reflects the burgeoning efforts of many in the behavioral sciences who are working to create a more sustainable society. The 4th Edition is organized in four sections. The first section provides a foundation by familiarizing readers with the current ecological crisis and its historical origins, and by offering a vision for a sustainable future. The next five chapters present psychological research methods, theory, and findings pertinent to understanding, and changing, unsustainable behavior. The third section addresses the reciprocal relationship between planetary and human wellbeing and the final chapter encourages readers to take what they have learned and apply it to move behavior in a sustainable direction. The book concludes with a variety of theoretically and empirically grounded ideas for how to face this challenging task with positivity, wisdom, and enthusiasm. This textbook may be used as a primary or secondary textbook in a wide range of courses on Ecological Psychology, Environmental Science, Sustainability Sciences, Environmental Education, and Social Marketing. It also provides a valuable resource for professional audiences of policymakers, legislators, and those working on sustainable communities.

usc psychology minor: *Forensics Ii* Harry A. Milman PhD, 2022-07-24 George Washington, the former first president of the United States, lay in his bed suffering from a high fever, a raw throat, and labored breathing. His three physicians milled around his bed, treating Washington with blisters of cantharides, tartar emetic, and bloodletting, removing nearly 40 percent of his total blood volume and causing excruciating pain. When Washington finally was relieved of his misery and died, the three doctors could not agree what caused his death. *Forensics II: The Science Behind the Deaths of*

Famous and Infamous People reads like a mystery novel, presenting biographical and scientific information that helps readers understand how medical examiners-coroners utilized forensic analysis to determine the causes and manners of death of thirty-six famous and infamous people, including Napoleon Bonaparte, a French military leader and politician; Charles Whitman, the University of Texas tower shooter; Bruce Lee, an actor and martial artist; Kurt Cobain, the lead singer of Nirvana; Jim Jones, a key figure in the Jonestown massacre; Aretha Franklin, a singer-songwriter; Alexander Litvinenko, a former officer of the Russian Federal Security Service; Jeffrey Epstein, a financier and convicted sex offender; and many more. The book is based on a review of publicly available autopsy and toxicology reports, published lay articles, and the scientific literature. Of the deaths reviewed, 39 percent were due to natural causes, 19 percent were accidental, and 6 (17 percent) were suicides. The remaining deaths comprise three cases each of homicide and justifiable homicide by police, one case of court-mandated execution, and three cases in which the manner of death was undetermined.

usc psychology minor: Occupational Science Ruth Zemke, Florence Clark, 1996-01-01 Occupational Science: The Evolving Discipline presents the most current and comprehensive information on the development of occupational science. This exciting resource offers stimulating ideas about occupation and its implications for health and occupational therapy practice. The papers in this book, most of which are from presentations at the Occupational Science Symposia, reflect an extensive range of perspectives. Presentations by Stephen Hawking, Jane Goodall, and Mary Catherine Bateson are included, as well as other invited and peer-reviewed presentations. In these papers, experienced scholars share their ideas, hypotheses, and preliminary research, tying together the theory behind the study of occupational science. Each section of the book begins with a detailed introduction in which Zemke and Clark describe the relationship of each paper to the study of occupational science. This unique text provides an understanding of occupation that will give therapists a heightened concern for those activities in which their patients invest their energies and time, a better understanding of how participation in occupation shapes self-identity, a way to identify the motivating factors for participation in occupation, and knowledge of how patients can enhance their life opportunities.

usc psychology minor: **Mean Field Games and Mean Field Type Control Theory** Alain Bensoussan, Jens Frehse, Phillip Yam, 2013-10-16 Mean field games and Mean field type control introduce new problems in Control Theory. The terminology "games" may be confusing. In fact they are control problems, in the sense that one is interested in a single decision maker, whom we can call the representative agent. However, these problems are not standard, since both the evolution of the state and the objective functional is influenced but terms which are not directly related to the state or the control of the decision maker. They are however, indirectly related to him, in the sense that they model a very large community of agents similar to the representative agent. All the agents behave similarly and impact the representative agent. However, because of the large number an aggregation effect takes place. The interesting consequence is that the impact of the community can be modeled by a mean field term, but when this is done, the problem is reduced to a control problem.

The text thoughtfully describes: the experience of psychosis, as well as the unique intervention method of fostering the therapeutic relationship; and the psychotic thought process from neurological, linguistic, and existential-psychological perspectives. Mental health professionals, individuals with lived psychotic experiences, and their family members and loved ones will find this book to be a strong and accurate voice that highlights the past and present

disappointments in mainstream public mental health treatment, while delivering hope in creating a secure, self-determined life.

usc psychology minor: Transpacific Studies Janet Alison Hoskins, Viet Thanh Nguyen, 2014-08-31 The Pacific has long been a space of conquest, exploration, fantasy, and resistance. Pacific Islanders had established civilizations and cultures of travel well before European explorers arrived, initiating centuries of upheaval and transformation. The twentieth century, with its various wars fought in and over the Pacific, is only the most recent era to witness military strife and economic competition. While “Asia Pacific” and “Pacific Rim” were late twentieth-century terms that dealt with the importance of the Pacific to the economic, political, and cultural arrangements that span Asia and the Americas, a new term has arisen—the transpacific. In the twenty-first century, U.S. efforts to dominate the ocean are symbolized not only in the “Pacific pivot” of American policy but also the development of a Transpacific Partnership. This partnership brings together a dozen countries—not including China—in a trade pact whose aim is to cement U.S. influence. That pact signals how the transpacific, up to now an academic term, has reached mass consciousness. Recognizing the increasing importance of the transpacific as a word and concept, this anthology proposes a framework for transpacific studies that examines the flows of culture, capital, ideas, and labor across the Pacific. These flows involve Asia, the Americas, and the Pacific Islands. The introduction to the anthology by its editors, Janet Hoskins and Viet Thanh Nguyen, consider the advantages and limitations of models found in Asian studies, American studies, and Asian American studies for dealing with these flows. The editors argue that transpacific studies can draw from all three in order to provide a critical model for considering the geopolitical struggle over the Pacific, with its attendant possibilities for inequality and exploitation. Transpacific studies also sheds light on the cultural and political movements, artistic works, and ideas that have arisen to contest state, corporate, and military ambitions. In sum, the transpacific as a concept illuminates how flows across the Pacific can be harnessed for purposes of both domination and resistance. The anthology’s contributors include geographers (Brenda S. A. Yeoh, Weiqiang Lin), sociologists (Yen Le Espiritu, Hung Cam Thai), literary critics (John Carlos Rowe, J. Francisco Benitez, Yunte Huang, Viet Thanh Nguyen), and anthropologists (Xiang Biao, Heonik Kwon, Nancy Lutkehaus, Janet Hoskins), as well as a historian (Laurie J. Sears), and a film scholar (Akira Lippit). Together these contributors demonstrate how a transpacific model can be deployed across multiple disciplines and from varied locations, with scholars working from the United States, Singapore, Japan and England. Topics include the Cold War, the Chinese state, U.S. imperialism, diasporic and refugee cultures and economies, national cinemas, transpacific art, and the view of the transpacific from Asia. These varied topics are a result of the anthology’s purpose in bringing scholars into conversation and illuminating how location influences the perception of the transpacific. But regardless of the individual view, what the essays gathered here collectively demonstrate is the energy, excitement, and insight that can be generated from within a transpacific framework.

Nearly all Japanese Americans were subject to accusations of disloyalty, but Buddhists aroused particular suspicion. From the White House to the local town council, many believed that Buddhism was incompatible with American values. Intelligence agencies targeted the Buddhist community, and Buddhist priests were deemed a threat to national security. In this pathbreaking account, based on personal accounts and extensive research in untapped archives, Duncan Ryūken Williams reveals how, even as they were stripped of their homes and imprisoned in camps, Japanese American Buddhists launched one of the most inspiring defenses of religious freedom in our nation's history, insisting that they could be both Buddhist and American. "A searingly instructive story...from which all Americans might learn." —Smithsonian "Williams' moving account shows how Japanese Americans transformed Buddhism into an American religion, and, through that struggle, changed the United States for the better." —Viet Thanh Nguyen, author of The Sympathizer "Reading this book, one cannot help but think of the current racial and religious tensions that have gripped this nation—and shudder." —Reza Aslan, author of Zealot

usc psychology minor: *The Ethical University* Wanda Teays, Alison Dundes Renteln, 2022-09-01 Universities and colleges across the United States have become hotbeds of administrative, academic, financial, and sexual scandals. Each new case erodes the societal recognition of the value of higher education systems. It is clear that in order for these institutions to reclaim their respected status requires an examination and rebuilding of the ethical foundations of higher education. This book gathers faculty and administrators from highly respected schools to examine the current situation and mark directions for change. Chapters address such topics as privacy, shared governance, grievance procedures, accountability, adjunct instructors, student athletes, campus policing, pedagogy and rubric review, libraries and access to information, aging faculty, international students, secrecy and public relations, and the corporatization of universities. Reviewing the challenges and opportunities that face higher education, this book argues that what holds institutions together over time are the values, principles, and traditions that contribute to moral character and lay a foundation for institutional integrity. usc psychology minor: Inside Graduate Admissions Julie R. Posselt, 2016-01-11 How does graduate admissions work? Who does the system work for, and who falls through its cracks? More people than ever seek graduate degrees, but little has been written about who gets in and why. Drawing on firsthand observations of admission committees and interviews with faculty in 10 top-ranked doctoral programs in the humanities, social sciences, and natural sciences, education professor Julie Posselt pulls back the curtain on a process usually conducted in secret. "Politicians, judges, journalists, parents and prospective students subject the admissions policies of undergraduate colleges and professional schools to considerable scrutiny, with much public debate over appropriate criteria. But the question of who gets into Ph.D. programs has by comparison escaped much discussion. That may change with the publication of Inside Graduate Admissions...While the departments reviewed in the book remain secret, the general process used by elite departments would now appear to be more open as a result of Posselt's book." —Scott Jaschik, Inside Higher Ed "Revealing...Provide[s] clear, consistent insights into what admissions committees look for." —Beryl Lieff Benderly, Science

usc psychology minor: *Handbook of Human Factors and Ergonomics Methods* Neville Anthony Stanton, Alan Hedge, Karel Brookhuis, Eduardo Salas, Hal W. Hendrick, 2004-08-30 Research suggests that ergonomists tend to restrict themselves to two or three of their favorite methods in the design of systems, despite a multitude of variations in the problems that they face. Human Factors and Ergonomics Methods delivers an authoritative and practical account of methods that incorporate human capabilities and limitations, envi

usc psychology minor: *Macroergonomics* Hal W. Hendrick, Brian Kleiner, 2002-04-01 This book's primary objective is to provide a comprehensive coverage of ergonomics in overall work system analysis and design. It provides a summary of the historical development of macroergonomics. It explains how an understanding of macroergonomics can lead to improvements in such things as reducing work-related lost time accidents; and describes the methods and tools used in work system analysis and design. Throughout, the integrating theme is that the full potential of an organization--in terms of productivity, safety, health, and Quality of Work Life (QWL)--can't be met unless the overall work system is designed to conform with the characteristics of its technology, personnel subsystem, and the external environment upon which it depends for its survival and success. Using a sociotechnical systems approach, this text discusses the application of macroergonomics to training system development, hazard management, technology transfer, large scale organizational change projects, office and factory automation, community planning and development, and job design. For each of these applications, actual case examples will be included. The book will appeal to teachers of introductory human factors/ergonomics courses as a supplemental text or as the primary text for a course fully devoted to macroergonomics. In addition, it should also appeal to practicing ergonomists internationally as a must add to their personal professional libraries.

usc psychology minor: *Communities in Action* National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

usc psychology minor: The Sanctimonious Psychoproctological Invasions: The Handbook for Political Analysis The Reverend Dr. Len Bergantino, ED. D, PH.D., 2019-10-24 The Sanctimonious Psychoproctological Invasions By: The Reverend Dr. Len Bergantino, ED. D, PH.D. From 2012 through 2018, Len Bergantino began each day with pro bono writings and invasive interventions that insist and expand upon the first amendment rights of United States citizens. In all areas, he is both knowledgeable and feels national, state, and local governments are stuck in socially immobile positions. He created ways to invade entire cultures and governments to move those stuck in quicksand off the dime and into a society that spirals upward. He refers to the creation of these methods as sanctimonious psychoproctological invasions in the creation of a political psychology that should be studies by all human beings who want to make a difference and give meaning to their lives.
