**west coast university dpt:** Clinical Reasoning and Decision Making in Physical Therapy Gina Musolino, Gail Jensen, 2024-06-01 Clinical reasoning is an essential non-negotiable element for all health professionals. The ability of the health professional to demonstrate professional competence, compassion, and accountability depend on a foundation of sound clinical reasoning. The clinical reasoning process needs to bring together knowledge, experience, and understanding of people, the environment, and organizations along with a strong moral compass in making sound decisions and taking necessary actions. While clinical reasoning and the role of mentors has been a focus of the continued growth and development of residency programs in physical therapy, there is a critical need to have a broader, in-depth look at how educators across academic and clinical settings intentionally facilitate the development of clinical reasoning skills across one's career. Clinical Reasoning and Decision Making in Physical Therapy: Facilitation, Assessment, and Implementation

fills this need by providing a comprehensive and in-depth focus on development of the patient-client management skills of clinical reasoning and clinical decision-making. It takes into account teaching and learning strategies, assessment, and technological applications across the continuum from novice to residents/fellows-in-training, along with academic and clinical faculty for both entry-level and specialist practice. Drs. Gina Maria Musolino and Gail Jensen have designed this comprehensive resource with contributions from professional colleagues. The text centers on life-long learning by encouraging the development of clinical reasoning abilities from professional education through residency education. The aim and scope of the text is directed for physical therapy education, to enhance clinical reasoning and clinical decision-making for developing professionals and post-professionals in both clinical and academic realms, and for the development of clinical and academic faculty. Clinical Reasoning and Decision Making in Physical Therapy uniquely offers both evidence-based approaches and pragmatic consultation from award-winning authors with direct practice experiences developing and implementing clinical reasoning/clinical decision-making in practice applications for teaching students, residents, patients, and clinical/academic faculty in classrooms, clinics, and through simulation and telehealth. Clinical Reasoning and Decision Making in Physical Therapy is the first of its kind to address this foundational element for practice that is key for real-world practice and continuing competence as a health care professional. Physical therapy and physical therapist assistant students, faculty, and clinicians will find this to be an invaluable resource to enhance their clinical reasoning and decision making abilities.

This text has been developed to accompany university courses in complementary and alternative therapies, as a reference manual for clinical practices, and as a resource for those interested in the science behind holistic therapies. Holistic therapies are those therapies not commonly found in allopathic medicine that are intended to stimulate a therapeutic response from both the body - neuromusculoskeletal and cardiopulmonary systems - and the mind. *Integrative Therapies in Rehabilitation*, Fourth Edition by Dr. Carol M. Davis is particularly designed for those health professionals who want to understand the scientific foundation and peer reviewed research supporting complementary and alternative therapies. The Fourth Edition is divided into two parts. The beginning chapters describe the latest cellular biology science and explain the theories put forth on the overall mechanisms of action of the effect of these various therapies on the soft tissue, fascia and nervous systems. The first part also chronicles the advancement of scientific research in the various therapies since the 1980's to explain, in cellular physiology terms, the outcomes observed by using a number of holistic therapies. The second part presents various therapies commonly integrated with allopathic therapies in rehabilitation - body work therapies, mind/body therapies, and energy work therapies. The text describes each therapy with a history, cellular mechanism of action, and an up-dated reference section of the evidence of

efficacy for the therapy as reported in the literature, often concluding with a case example. Integrative Therapies in Rehabilitation, Fourth Edition will be the go-to resource for health professionals to understand the scientific evidence and efficacy of complementary and alternative therapies for rehabilitation and improving patient outcomes.
