boeing 787 9 virgin atlantic upper class: Airline Finance Peter S. Morrell, 2019-09-30 Air

transport industry finance, with its complexity and special needs such as route rights, airport slots, aircraft leasing options and frequent flyer programmes, requires specific knowledge. While there are numerous financial management and corporate finance texts available, few of these provide explanations for the singularities of the airline industry with worked examples drawn directly from the industry itself. Revised and updated in its third edition, this internationally renowned and respected book provides the essentials to understanding all areas of airline finance. Designed to address each of the distinct areas of financial management in an air transport industry context, it also shows how these fit together, while each chapter and topic provides a detailed resource which can be also consulted separately. Supported at each stage by practical airline examples, it examines the financial trends and prospects for the airline industry as a whole, contrasting the developments for the major regions and airlines. Important techniques in financial analysis are applied to the airline industry, together with critical discussion of key issues. Thoroughly amended and updated throughout, the third edition reflects the many developments that have affected the industry since 2001. It features several important new topics, including Low Cost Carriers (LCCs), fuel hedging and US Chapter 11 provisions. The sections on financial statements and privatisation have been expanded, and a new chapter has been added on equity finance and IPOs. New case studies have been added, as well as the latest available financial data. The range and perspective is even greater than before, with significant expansion of material specific to the US and Asia. The book is a key resource for students of airline management, and a sophisticated and authoritative guide for analysts in financial institutions and consultancies, executives in airlines and related industries, and civil aviation departments.

boeing 787 9 virgin atlantic upper class: QF32 Richard de Crespigny, 2012-08-01 QF32 is the award winning bestseller from Richard de Crespigny, author of the forthcoming Fly!: Life Lessons from the Cockpit of QF32 On 4 November 2010, a flight from Singapore to Sydney came within a knife edge of being one of the world's worst air disasters. Shortly after leaving Changi Airport, an explosion shattered Engine 2 of Qantas flight QF32 - an Airbus A380, the largest and most advanced passenger plane ever built. Hundreds of pieces of shrapnel ripped through the wing and fuselage, creating chaos as vital flight systems and back-ups were destroyed or degraded. In other hands, the plane might have been lost with all 469 people on board, but a supremely experienced flight crew, led by Captain Richard de Crespigny, managed to land the crippled aircraft and safely disembark the passengers after hours of nerve-racking effort. Tracing Richard's life and career up until that fateful flight, QF32 shows exactly what goes into the making of a top-level airline pilot, and the extraordinary skills and training needed to keep us safe in the air. Fascinating in its detail and vividly compelling in its narrative, QF32 is the riveting, blow-by-blow story of just what happens when things go badly wrong in the air, told by the captain himself. boeing 787 9 virgin atlantic upper class: Climate Change and Aviation Stefan Gossling, Paul Upham, 2012-05-04 'This is a timely, challenging and fascinating book on a topic of central importance to the success or otherwise of our climate change policies. It sets down a clear marker for what has to be done in the aviation sector.' Professor John Whitelegg, Stockholm Environment Institute, University of York, UK 'Climate Change and Aviation presents a clear picture of the transport sector's greatest challenge: how to reconcile aviation's immense popularity with its considerable environmental damage and its dependence on liquid hydrocarbon energy sources. This book avoids wishful thinking and takes the much harder, but more productive, path of considering difficult solutions that clash with short-term and short-sighted expectations about the unlimited growth potential for flying.' Professor Anthony Perl, Urban Studies Program, Simon Fraser University, Canada 'A convincing and timely collection that brings together an impressive range of expertise. The book integrates various perspectives into a powerful core argument - we must do something, and quickly, to tackle the impact of aviation on our environment. The authors recognise the political difficulties associated with promoting change but present constructive options for policy

makers. Required reading, especially for transport ministers set on promoting the growth of air travel.' Professor Jon Shaw, Director of the Centre for Sustainable Transport, University of Plymouth, UK Trends such as the massive growth in availability of air travel and air freight are among those which have led to aviation becoming one of the fastest growing emitters of greenhouse gases. These trends have also caused a shift in expectations of how we do business, where we go on holiday, and what food and goods we can buy. For these reasons aviation is (and is set to stay) high up on global political, organizational and media agendas. This textbook is the first to attempt a comprehensive review of the topic, bringing together an international team of leading scientists. Starting with the science of the environmental issues, it moves on to cover drivers and trends of growth, socio-economics and politics, as well as mitigation options, the result being a broad yet detailed examination of the field. This is essential reading for undergraduate and postgraduate courses in transport, tourism, the environment, geography and beyond, while also being a valuable resource for professionals and policymakers seeking a clear understanding of this complex yet urgently pressing issue.

boeing 787 9 virgin atlantic upper class: *Up in the Air* Greg J. Bamber, Jody Hoffer Gittel, Thomas A. Kochan, Andrew Von Nordenflycht, 2013-07-15 And you thought the passengers were mad. Airline employees are fed up, too-with pay cuts, increased workloads and management's miserly ways, which leave workers to explain to often-enraged passengers why flying has become such a miserable experience.—New York Times, December 22, 2007 When both an industry's workers and its customers report high and rising frustration with the way they are being treated, something is fundamentally wrong. In response to these conditions, many of the world's airlines have made ever-deeper cuts in services and their workforces. Is it too much to expect airlines, or any other enterprise, to provide a fair return to investors, high-quality reliable service to their customers, and good jobs for their employees? Measured against these three expectations, the airline industry is failing. In the first five years of the twenty-first century alone, U.S. airlines lost a total of \$30 billion while shedding 100,000 jobs, forcing the remaining workers to give up over \$15 billion in wages and benefits. Combined with plummeting employee morale, shortages of air traffic controllers, and increased congestion and flight delays, a total collapse of the industry may be coming. Is this state of affairs inevitable? Or is it possible to design a more sustainable, less volatile industry that better balances the objectives of customers, investors, employees, and the wider society? Does deregulation imply total abrogation of government's responsibility to oversee an industry showing the clear signs of deterioration and increasing risk of a pending crisis? Greg J. Bamber, Jody Hoffer Gittel, Thomas A. Kochan, and Andrew von Nordenflycht explore such questions in a well-informed and engaging way, using a mix of quantitative evidence and qualitative studies of airlines from North America, Asia, Australia, and Europe. *Up in the Air* provides clear and realistic strategies for achieving a better, more equitable balance among the interests of customers, employees, and shareholders. Specifically, the authors recommend that firms learn from the innovations of companies like Southwest and Continental Airlines in order to build a positive workplace culture that fosters coordination and commitment to high-quality service, labor relations policies that avoid long drawn-out conflicts in negotiating new agreements, and business strategies that can sustain investor, employee, and customer support through the ups and downs of business cycles.

boeing 787 9 virgin atlantic upper class: Open Skies for Africa Charles E Schlumberger, 2010-06-23 In Africa, where poor roads, ports, and railways often constrain efficient transportation, air transport holds great potential as a lever for economic growth and development. Yet Africa has suffered several decades of inefficient air services. Uncompetitive flag carriers, set up by newly independent African states, offered primarily intercontinental flights, while the domestic air service market remained underdeveloped and underserved. The 1999 pan-African treaty on liberalization of access to air transport markets, the Yamoussoukro Decision, attempted to address these shortcomings. Yet a decade later, only partial liberalization has been achieved. 'Open Skies for Africa: Implementing the Yamoussoukro Decision' reviews progress made in carrying out the treaty and suggests ways in which the liberalization process can be encouraged. The book analyzes the completed and still-pending steps toward implementation of the Yamoussoukro Decision, both on a pan-African level and within various regions. Special focus is given to the challenges posed by the poor aviation safety and security standards that exist in most African countries. Finally, the book measures the impact that certain policy steps of the Yamoussoukro Decision have had and evaluates the economic significance of air transportation and its full liberalization in Africa. The book concludes that the process of liberalizing African air services must continue, and provides policy recommendations for the way forward.

This final Aviation Policy Framework will fully replace the 2003 Air Transport White Paper (Cm.6046, ISBN 9780101604628) on aviation, alongside Government decisions following the recommendations of the Independent Airports Commission, established September 2012. The Aviation Policy Framework is underpinned by two core principles: (i) Collaboration: achieved by working together with industry, regulators, experts, local communities to identify workable solutions; (ii) Transparency: decision making based on clear, independent information and processes. The Framework Policy covers the following areas: (1) Supporting growth and benefits of aviation; (2) Managing aviation's environmental impacts, such as climate change and noise pollution; (3) The role of the Airports Commission; (4) Other aviation objectives, including: protecting passenger' rights; competition and regulation policy; airspace; safety; security and planning.

boeing 787 9 virgin atlantic upper class: The Evolution of the Airline Industry James Baldwin, 2019-08-18 This book gives a brief but concise narrative on the evolution of the airline industry from its beginnings to the present day. The focus is on regulations, historic events and influencing factors that shaped the industry. Starting with the Wright Flyer, the book details the early conventions and regulatory framework, the development of the commercial airline industry through the 1930s, World War II and the Chicago Convention, that created the current regulatory framework of the industry. The book then goes into the regulated and protectionist era and developments that eventually led to the deregulation and liberalization of the industry. At this point, the industry transcended from heavy government involvement to an industry driven by economic

factors. Following this change, the industry experienced unprecedented growth leading to the formation of the so-called Sixth Freedom airlines, the airline alliances and the low-cost and ultra-low-cost carriers. This book is an excellent guide to how the airline industry evolved into what it is today.

boeing 787 9 virgin atlantic upper class: *Mr Sia: Fly Past* Ken Hickson, 2014-10-28 Introducing the life and times of a legend in international aviation — Lim Chin Beng — the man they called Mr SIA. Absorbing the life and work of Lim Chin Beng is like watching a fly past of airlines and aircraft old and new. In this book, his past comes to meet you in many forms — designs, shapes, figures, photographs, episodes, places, people and you discover the connections with business, society and international aviation today and into the future. Here's a man who was instrumental in taking the very basic components of a business — like a potter taking the clay — and creating what has become one of the world's leading brands, Singapore Airlines. But this airline 'specialist', trained as an economist, had more jobs to do. His broad range of interests — arts and sports, property and tourism — led to him being called on to do his 'national service' for Singapore. He was Ambassador to Japan for two terms and trade negotiator, chairman of the Singapore Tourism Board, Changi Airport International, Singapore Airshow, Singapore Press Holdings, Ascott Group, and ST Aerospace. Described as a quiet achiever and a visionary, this modest gentleman was not afraid to make bold decisions and take risks, even to the extent of setting up a budget airline, Valuair. Here was one man, who in his time, played many parts, on the world's stage and at home.

boeing 787 9 virgin atlantic upper class: Sociocultural Systems Frank W. Elwell, 2013-01-01
Macrosociology--the study of large-scale social structures and the fundamental principles of social organization--was the style of sociology practiced by the founders of the discipline. Today, the social theories of Karl Marx, Max Weber, Émile Durkheim, and Herbert Spencer (among others) are commonly studied as part of the history of the field, but, although the macrosociological approach that these thinkers advocated is still employed, it no longer dominates the discipline. Instead, sociologists typically adopt a narrower focus, specializing in areas such as social psychology, medicine, religion, or the study of social stratification. Examining the bigger picture is a task often left to public intellectuals. Sociocultural Systems aims to reinstate macrosociology as the heart of the discipline by demonstrating that both classical and contemporary macrosociologists stand upon common ground. Focusing on the broad issues that concerned the founders, Elwell addresses questions such as: Historically, what factors accounted for the origin, survival, and evolution of sociocultural systems? Why were some societies more technologically advanced than others? What is the origin of capitalism? What factors determine the allocation of goods and services within and among societies? What effects do changes in government and economic institutions have on communities? Elwell argues that, as evolution does for biology, the macrosociological paradigm offers an analytical strategy that can be used both to guide and prioritize research in all of the myriad specialties within sociology and to lay forth an orderly body of knowledge for students. Clearly articulating important sociological principles, Sociocultural Systems provides a critical understanding of social institutions and issues, while also furnishing a framework for possible solutions to the perennial social crises that are part and parcel of the development of human societies.
