caltech commencement speaker 2023: Lessons from a Third Grade Dropout Rick Rigsby, 2019-02-05 A USA TODAY and Wall Street Journal bestseller! Learn how to live a life of character and integrity—by following the simple advice of a third grade dropout. Be inspired by the book behind Dr. Rick Rigsby's viral graduation speech. After his wife died, Rick Rigsby was ready to give up. The bare minimum was good enough. Rigsby was content to go through the motions, living out his life as a shell of himself. But then he remembered the lessons his father taught him years before— incredibly simple, yet incredibly profound. These lessons weren't about advanced mathematics or the secrets of the stock market. They were quite straightforward, in fact, as Rigsby's father never made it through third grade. But if this man's instructions were powerful enough to inspire one of his children to earn a Ph.D. and another to become a judge—imagine what they can do for you. While Rick Rigsby's father was a third-grade dropout, he was a man who never hid behind any excuse. A man who never allowed his problems or lack of a formal education to determine his present or affect his future. A man who realized that destiny was a choice and not a chance. In *Lessons from a Third Grade Dropout*, Rigsby shares the simple lessons from his father that will transform your mindset, including: Remain true to yourself Think the best at all times Give your best regardless of the circumstances Keep standing no matter what Join Rigsby as he dusts off time-tested beliefs and shares his father's impactful, far-reaching story—of how a life can be enhanced, of how a corporate culture can be changed, of how a family can be united—by living the simple lessons of a third-grade dropout.

This book presents compelling neuroimaging, electrophysiological, lesional, and neurocomputational models in combination with hormonal and genetic approaches, which have led to a clearer understanding of the neural mechanisms behind how the brain makes decisions. The five parts of the book address distinct but inter-related topics and are designed to serve both as classroom introductions to major subareas in decision neuroscience and as advanced syntheses of all that has been accomplished in the last decade. Part I is devoted to anatomical, neurophysiological, pharmacological, and optogenetics animal studies on reinforcement-guided decision making, such as the representation of instructions, expectations, and outcomes; the updating of action values; and the evaluation process guiding choices between prospective rewards. Part II covers the topic of the neural representations of motivation, perceptual decision making, and value-based decision making in humans, combining neurocomputational models and brain imaging studies. Part III focuses on the rapidly developing field of social decision neuroscience, integrating recent mechanistic understanding of social decisions in both non-human primates and humans. Part IV covers clinical aspects involving disorders of decision making that link together basic research areas including systems, cognitive, and clinical neuroscience; this part examines dysfunctions of decision making in neurological and psychiatric disorders, such as Parkinson's disease, schizophrenia, behavioral addictions, and focal brain lesions. Part V focuses on the roles of various hormones (cortisol, oxytocin, ghrelin/leptin) and genes that underlie inter-individual differences observed with stress, food choices, and social decision-making processes. The volume is essential reading for anyone interested in decision making neuroscience. With contributions that are forward-looking assessments of the current and future issues faced by researchers, *Decision Neuroscience* is essential reading for anyone interested in decision-making neuroscience. - Provides comprehensive coverage of approaches to studying individual and social decision neuroscience, including primate neurophysiology, brain imaging in healthy humans and in various disorders, and genetic and hormonal influences on decision making - Covers multiple levels of analysis, from molecular

mechanisms to neural-systems dynamics and computational models of how we make choices - Discusses clinical implications of process dysfunctions, including schizophrenia, Parkinson's disease, eating disorders, drug addiction, and pathological gambling - Features chapters from top international researchers in the field and full-color presentation throughout with numerous illustrations to highlight key concepts

caltech commencement speaker 2023: Left to Their Own Devices Julie M. Albright, 2019-04-16 A sociologist explores the many ways that digital natives' interaction with technology has changed their relationship with people, places, jobs, and other stabilizing structures and created a new way of life that is at odds with the American Dream of past generations. Digital natives are hacking the American Dream. Young people brought up with the Internet, smartphones, and social media are quickly rendering old habits, values, behaviors, and norms a distant memory--creating the greatest generation gap in history. In this eye-opening book, digital sociologist Julie M. Albright looks at the many ways in which younger people, facilitated by technology, are coming untethered from traditional aspirations and ideals, and asks: What are the effects of being disconnected from traditional, stabilizing social structures like churches, marriage, political parties, and long-term employment? What does it mean to be human when one's ties to people, places, jobs, and societal institutions are weakened or broken, displaced by digital hyper-connectivity? Albright sees both positives and negatives. On the one hand, mobile connectivity has given digital nomads the unprecedented opportunity to work or live anywhere. But, new threats to well-being are emerging, including increased isolation, anxiety, and loneliness, decreased physical exercise, ephemeral relationships, fragmented attention spans, and detachment from the calm of nature. In this time of rapid, global, technologically driven change, this book offers fresh insights into the unintended societal and psychological implications of lives exclusively lived in a digital world.

caltech commencement speaker 2023: The Hungry Mind Susan Engel, 2015-03-09 Despite American education's recent mania for standardized tests, testing misses what really matters about learning: the desire to learn in the first place. Curiosity is vital, but it remains a surprisingly understudied characteristic. The Hungry Mind is a deeply researched, highly readable exploration of what curiosity is, how it can be measured, how it develops in childhood, and how it can be fostered in school. "Engel draws on the latest social science research and incidents from her own life to understand why curiosity is nearly universal in babies, pervasive in early childhood, and less evident in school...Engel's most important finding is that most classroom environments discourage curiosity...In an era that prizes quantifiable results, a pedagogy that privileges curiosity is not likely to be a priority." —Glenn C. Altschuler, *Psychology Today* "Susan Engel's *The Hungry Mind*, a book which engages in depth with how our interest and desire to explore the world evolves, makes a valuable contribution not only to the body of academic literature on the developmental and educational psychology of children, but also to our knowledge on why and how we learn." —Inez von Weitershausen, *LSE Review of Books*

caltech commencement speaker 2023: Merchants of Doubt Naomi Oreskes, Erik M. Conway, 2011-10-03 The U.S. scientific community has long led the world in research on such areas as public health, environmental science, and issues affecting quality of life. These scientists have produced landmark studies on the dangers of DDT, tobacco smoke, acid rain, and global warming. But at the same time, a small yet potent subset of this community leads the world in vehement denial of these dangers. *Merchants of Doubt* tells the story of how a loose-knit group of high-level scientists and scientific advisers, with deep connections in politics and industry, ran effective campaigns to mislead the public and deny well-established scientific knowledge over four decades. Remarkably, the same individuals surface repeatedly--some of the same figures who have claimed that the science of global warming is not settled denied the truth of studies linking smoking to lung cancer, coal smoke to acid rain, and CFCs to the ozone hole. Doubt is our product, wrote one tobacco executive. These experts supplied it. Naomi Oreskes and Erik M. Conway, historians of science, roll back the rug on this dark corner of the American scientific community, showing how ideology and corporate interests, aided by a too-compliant media, have skewed public understanding of some of the most pressing issues of our era.

caltech commencement speaker 2023: *The One World Schoolhouse* Salman Khan, 2012-10-02 A free, world-class education for anyone, anywhere: this is the goal of the Khan Academy, a passion project that grew from an ex-engineer and hedge funder's online tutoring sessions with his niece, who was struggling with algebra, into a worldwide phenomenon. Today millions of students, parents, and teachers use the Khan Academy's free videos and software, which have expanded to encompass nearly every conceivable subject; and Academy techniques are being employed with exciting results in a growing number of classrooms around the globe. Like many innovators, Khan rethinks existing assumptions and imagines what education could be if freed from them. And his core idea-liberating teachers from lecturing and state-mandated calendars and opening up class time for truly human interaction-has become his life's passion. Schools seek his advice about connecting to students in a digital age, and people of all ages and backgrounds flock to the site to utilize this fresh approach to learning. In *The One World Schoolhouse*, Khan presents his radical vision for the future of education, as well as his own remarkable story, for the first time. In these pages, you will discover, among other things: How both students and teachers are being bound by a broken top-down model invented in Prussia two centuries ago Why technology will make classrooms more human and teachers more important How and why we can afford to pay educators the same as other professionals/DIV How we can bring creativity and true human interactivity back to learning/DIV Why we should be very optimistic about the future of learning. Parents and politicians routinely bemoan the state of our education system. Statistics suggest we've fallen behind the rest of the world in literacy, math, and sciences. With a shrewd reading of history, Khan explains how this crisis presented itself, and why a return to mastery learning, abandoned in the twentieth century and ingeniously revived by tools like the Khan Academy, could offer the best opportunity to level the playing field, and to give all of our children a world-class education now. More than just a solution, *The One World Schoolhouse* serves as a call for free, universal, global education, and an explanation of how Khan's simple yet revolutionary thinking can help achieve this inspiring goal.

Feynman, 2005-04-06 This collection from scientist and Nobel Peace Prize winner highlights the achievements of a man whose career reshaped the world's understanding of quantum electrodynamics. *The Pleasure of Finding Things Out* is a magnificent treasury of the best short works of Richard P. Feynman—from interviews and speeches to lectures and printed articles. A sweeping, wide-ranging collection, it presents an intimate and fascinating view of a life in science—a life like no other. caltech commencement speaker 2023: *Unsettled (Updated and Expanded Edition)* Steven E. Koonin, 2024-06-11 In this updated and expanded edition of climate scientist Steven Koonin's groundbreaking book, go behind the headlines to discover the latest eye-opening data about climate change—with unbiased facts and realistic steps for the future. Greenland's ice loss is accelerating. Extreme temperatures are causing more fatalities. Rapid 'climate action' is essential to avoid a future climate disaster. You've heard all this presented as fact. But according to science, all of these statements are profoundly misleading. With the new edition of *Unsettled*, Steven Koonin draws on decades of experience—including as a top science advisor to the Obama administration—to clear away the fog and explain what science really says (and doesn't say). With a new introduction, this edition now features reflections on an additional three years of eye-opening data, alternatives to unrealistic "net zero" solutions, global energy inequalities, and the energy crisis arising from the war in Ukraine. When it comes to climate change, the media, politicians, and other prominent voices have declared that "the science is settled." In reality, the climate is changing, but the why and how aren't as clear as you've probably been led to believe. Koonin takes readers behind the headlines, dispels popular myths, and unveils little-known truths: Despite rising greenhouse gas emissions, global temperatures decreased from 1940 to 1970 Models currently used to predict the future do not accurately describe the climate of the past, and modelers themselves strongly doubt their regional predictions There is no compelling evidence that hurricanes are becoming more frequent—or that

predictions of rapid sea level rise have any validity Unsettled is a reality check buoyed by hope, offering the truth about climate science—what we know, what we don't, and what it all means for our future.

An explosive growth in research on how people learn has revealed many ways to improve teaching and catalyze learning at all ages. The purpose of this book is to present this new science of learning so that educators can creatively translate the science into exceptional practice. The book is highly appropriate for the preparation and professional development of teachers and college faculty, but also parents, trainers, instructional designers, psychology students, and simply curious folks interested in improving their own learning. as both a textbook and a popular read. With everyday language, engaging examples, a sense of humor, and solid evidence, it describes 26 unique ways that students learn. Each chapter offers a concise and approachable breakdown of one way people learn, how it works, how we know it works, how and when to use it, and what mistakes to avoid. The book presents learning research in a way that educators can creatively translate into exceptional lessons and classroom practice. The book covers field-defining learning theories ranging from behaviorism (R is for Reward) to cognitive psychology (S is for Self-Explanation) to social psychology (O is for Observation). The chapters also introduce lesser-known theories exceptionally relevant to practice, such as arousal theory (X is for eXcitement). Together the theories, evidence, and strategies from each chapter can be combined endlessly to create original and effective learning plans and the means to know if they succeed.

caltech commencement speaker 2023: *Certain Trumpets* Garry Wills, 2013-05-28 This “beautifully written and reasoned” (Booklist) narrative by Pulitzer Prize-winning author Garry Wills examines what constitutes meaningful leadership, and why it is so essential to society. What makes a leader? How do we identify effective leadership, and how should—and shouldn’t—that power be used? In *Certain Trumpets*, Garry Wills presents portraits of eminent leaders including FDR to Ross Perot, King David, Martha Graham, and many others, offering an illuminating lens for studying society and ourselves. Dividing these portraits into sixteen leadership categories ranging from military to charismatic, intellectual, rhetorical, and elected, Wills highlights what makes each of his subjects unique, crafting along the way a distinct and incisive definition of leadership as a reciprocal engagement between two contrasting wills that serves to mobilize us toward a common good, and explaining why leadership is so often a contentious and emotionally charged subject. “A stunningly literate and thoughtful examination of what makes a leader...[and] a welcome antidote to some of the more egregious ‘management style’ drivel,” (Kirkus Reviews), *Certain Trumpets* is an inspiring and edifying tour through the history of an indispensable social art.

Mifflin, 2011 Entrepreneurs constantly seek capital for new and existing ventures even though they face considerable constraints in obtaining financing. Venture capital from outside investors has been considered an important driver in the start-up and growth of entrepreneurial firms. Unlike venture capital investments, angel investments are made by individual investors who do not make up a known population. Therefore, much of what is reported about angel investing comes from anecdotes and surveys of convenience samples, which are prone to biases and inaccuracies. This book examines the roles of angel investing in the entrepreneurial finance system and the funded and unfunded business plans to determine the key factors in the venture capital investment decision process.

caltech commencement speaker 2023: *The Merit Myth* Anthony P. Carnevale, Peter Schmidt, Jeff Strohl, 2020-05-19 An eye-opening and timely look at how colleges drive the very inequalities they are meant to remedy, complete with a call—and a vision—for change Colleges fiercely defend America's deeply stratified higher education system, arguing that the most exclusive schools reward the brightest kids who have worked hard to get there. But it doesn't actually work this way. As the recent college-admissions bribery scandal demonstrates, social inequalities and colleges' pursuit of wealth and prestige stack the deck in favor of the children of privilege. For education scholar and critic Anthony P. Carnevale, it's clear that colleges are not the places of aspiration and equal

opportunity they claim to be. The Merit Myth calls out our elite colleges for what they are: institutions that pay lip service to social mobility and meritocracy, while offering little of either. Through policies that exacerbate inequality, including generously funding so-called merit-based aid for already-wealthy students rather than expanding opportunity for those who need it most, U.S. universities—the presumed pathway to a better financial future—are woefully complicit in reproducing the racial and class privilege across generations that they pretend to abhor. This timely and incisive book argues for unrigging the game by dramatically reducing the weight of the SAT/ACT; measuring colleges by their outcomes, not their inputs; designing affirmative action plans that take into consideration both race and class; and making 14 the new 12—guaranteeing every American a public K-14 education. The Merit Myth shows the way for higher education to become the beacon of opportunity it was intended to be.

caltech commencement speaker 2023: A Fortress in Brooklyn Nathaniel Deutsch, Michael Casper, 2021-05-11 The epic story of Hasidic Williamsburg, from the decline of New York to the gentrification of Brooklyn A rich chronicle of the Satmar Hasidic community in Williamsburg. . . . This expert account enlightens.—Publishers Weekly “One of the most creative and iconoclastic works to have been written about Jews in the United States.”—Eliyahu Stern, Yale University The Hasidic community in the Williamsburg section of Brooklyn is famously one of the most separatist, intensely religious, and politically savvy groups of people in the entire United States. Less known is how the community survived in one of the toughest parts of New York City during an era of steep decline, only to later resist and also participate in the unprecedented gentrification of the neighborhood. Nathaniel Deutsch and Michael Casper unravel the fascinating history of how a group of determined Holocaust survivors encountered, shaped, and sometimes fiercely opposed the urban processes that transformed their gritty neighborhood, from white flight and the construction of public housing to rising crime, divestment of city services, and, ultimately, extreme gentrification. By showing how Williamsburg’s Hasidim rejected assimilation while still undergoing distinctive forms of Americanization and racialization, Deutsch and Casper present both a provocative counter-history of American Jewry and a novel look at how race, real estate, and religion intersected in the creation of a quintessential, and yet deeply misunderstood, New York neighborhood.

Sacrificial Limbs chronicles the everyday lives and political activism of disabled veterans of Turkey's Kurdish war, one of the most volatile conflicts in the Middle East. Through nuanced ethnographic portraits, Açiksöz examines how veterans' experiences of war and disability are closely linked to class, gender, and ultimately the embrace of ultranationalist right-wing politics. Bringing the reader into military hospitals, commemorations, political demonstrations, and veterans' everyday spaces of care, intimacy, and activism, *Sacrificial Limbs* provides a vivid analysis of the multiple and sometimes contradictory forces that fashion veterans' bodies, political subjectivities, and communities. It is essential reading for students and scholars interested in anthropology, masculinity, and disability.

caltech commencement speaker 2023: *Product Variety Management* Teck-Hua Ho,

Christopher S. Tang, 1998-09-30 Product proliferation has become a common phenomenon. Most companies now offer hundreds, if not thousands, of stock keeping units (SKUs) in order to compete in the market place. Companies with expanding product and service varieties face with problems of obtaining accurate demand forecasts, controlling production and inventory costs, and providing high quality and good delivery performance for the customers. Marketing managers often advocate widening product lines for increasing revenue and market share. However, the breadth of product line can also decrease the efficiency of manufacturing processes and distribution systems. Thus firms must weigh the benefits of product variety against its cost in order to determine the optimal level of product variety to offer to their customers. Academics and practitioners are interested in several fundamental questions about product variety. For instance, why do companies extend their product lines? Do consumers care about product variety? Will a brand with more variety enjoy higher market share? How should product variety be measured? How can a company exploit its product and process design to deliver a higher level of product variety quickly and cheaply? What should the level of product variety be and what should the price of each of the product variants be? What kind of 'challenges would a company face in offering a high level of product variety and how can these obstacles be overcome? The solutions to these questions span multiple functions and disciplines.
